Patient is a 16-years-old, Kelly, female. Transported by a helicopter. Admitted for a fall resulting in a fracture of the right femur and the right humerus during a skiing vacation. Patient has a history of asthma. Patient is AO4 and responds to commands. Vital signs as documented T:98.6 HR:74 O2Sat: 97%. Patient appears annoyed, agitated and a bit angry. Patient stated, "I don't want my friends to see me like this". Refused treatment from PT and medications. Auscultated the lungs and found wheezing and during the assessment a cough was noticed. Patient had an open reduction fixation to open rods and screws and reported pain level scoring a 2 on a scale 0 to 10. Patient has 2 casts no sign of infection, no redness or edema, capillary refill less than 3 secs on the toes and fingers. Elevated the head of the bed for proper breathing and help with the cough. Patient was instructed to practice deep breathing exercises, take her albuterol as ordered and to get up and try to walk to prevent pneumonia from being bedbound during recovery. We suggested personal items from home and maybe some nail polish that she enjoys, and it turned out to be helpful for the patient's readiness to receive the proper treatment, she appears more interested now as we build a better rapport. Continue to monitor patient. Call light within reach.

Cheit, 2014-04-28 In the 1980s a series of child sex abuse cases rocked the United States The most famous case was the 1984 McMartin preschool case but there were a number of others as well By the latter part of the decade the assumption was widespread that child sex abuse had become a serious problem in America Yet within a few years the concern about it died down considerably The failure to convict anyone

in the McMartin case and a widely publicized appellate decision in New Jersey that freed an accused molester had turned the dominant narrative on its head In the early 1990s a new narrative with remarkable staying power emerged the child sex abuse cases were symptomatic of a moral panic that had produced a witch hunt A central claim in this new witch hunt narrative was that the children who testified were not reliable and easily swayed by prosecutorial suggestion In time the notion that child sex abuse was a product of sensationalized over reporting and far less endemic than originally thought became the new common sense But did the new witch hunt narrative accurately represent reality As Ross Cheit demonstrates in his exhaustive account of child sex abuse cases in the past two and a half decades purveyors of the witch hunt narrative never did the hard work of examining court records in the many cases that reached the courts throughout the nation Instead they treated a couple of cases as representative and concluded that the issue was blown far out of proportion Drawing on years of research into cases in a number of states Cheit shows that the issue had not been blown out of proportion at all In fact child sex abuse convictions were regular occurrences and the crime occurred far more frequently than conventional wisdom would have us believe Cheit's aim is not to simply prove the narrative wrong however He also shows how a narrative based on empirically thin evidence became a theory with real social force and how that theory stood at odds with a far more grim reality The belief that the charge of child sex abuse was typically a hoax also left us unprepared to deal with the far greater scandal of child sex abuse in the Catholic Church which incidentally has served to substantiate Cheit's thesis about the pervasiveness of the problem In sum The Witch Hunt Narrative is a magisterial and empirically powerful account of the social dynamics that led to the denial of widespread human tragedy
