Rudell,2009-07 Details about many of the divers that I evaluated are included with comments on the way their dives got them into trouble and the chamber at City Island NAHC I discuss their treatment profiles and the results of their treatment It presents a larger series of bent divers than any I am aware of Should you find another comparable series contact me at avoidaccidents ymail com Ideas about bends have changed from the concept that a bubble formed in the nervous system because of a rapid ascent or the joint by cavitation negative pressure Rapid ascent or joint motion caused the culprit to appear and pressure would make the bubble go away Now we are focused on treating tissue damage with oxygen But we are still using pressure and oxygen to increase the partial pressure of oxygen in the affected tissue The treatment of choice is the 5 hour long U S Navy Treatment Table 6 which washes out the nitrogen in the tissue and washes in the oxygen Careful understanding of how my patients got bent and how they responded should make any diver more cautious regarding repetitive diving and a multi day series of dives Pressure at the deepest part of the dive washes in the nitrogen over time Fatty tissue that includes the central nervous system and peripheral nerves absorbs more nitrogen than watery tissues such as muscle Shaping up to dive includes weight loss abstinence during the duration of the series of dives and improving lung function Physical conditioning prevents tachycardia a rapid heart beat during exertion A program of regular exercise two or three times a week prevents early fatigue during prolonged exertion or increases stamina Exercise such as walking 20 or more minutes a day for several weeks before diving is as important as paying for the trip Swimming accustoms one to buoyancy relaxing in the water and adjusting temperature regulating reflexes such as vaso constriction in the skin on immersion Dive accidents sometimes do not have a treatable solution Most accidents resolve after one re compression

breathing oxygen under pressure Many patients were treated multiple times and some did not get complete relief of their symptoms and or neurological findings Immediate therapy traditionally is in water re compression which has its drawbacks It is difficult to administer and hypothermia fatigue and drowning are risks Surface On Deck oxygen breathing from a face mask or immediate re compression in a chamber are always effective treatments Transport to a facility has logistical problems and the destination chamber may not be functional when it is needed The U S Navy Diving Manual Rev 6 Vol 5 20 4 4 2 1 has procedures for In Water Re compression using AIR 20 4 4 2 2 In Water Re compression Using Oxygen Both sections advise going to 30 fsw and additional instructions for decompressing If oxygen is used and the decompression has been completed then 3 hours of oxygen breathing is the procedure One cylinder of oxygen and a face mask are good for one diver for 3 hours Where are the other cylinders for other divers The book is about the chamber that I personally operated and staffed I was almost continually available The number of bent divers that I treated not all are included in the book because they were routine speaks for itself AAA Avoid An Accident Plan Safe Dives **NOAA Diving Manual** United States.
