*The Classroom* Ogborn, Jon, Kress, Gunther, Martins, Isabel, 1996-11-01 This is an impressive book. It is an example of that rare item: a book about complex scientific ideas expressed in clear, simple language built on real teacher-learner conversations. Starting in the classroom or the laboratory with the most common occurrence—a teacher offering an explanation—it proceeds by analysing the nature of specific explanations so that teachers can gain fuller insights into what is happening. Having teased out the processes of explanation, the authors then reconstruct them, showing how elaboration, transformation, and demonstration can enhance the understanding of the learner. Professor Peter Mortimore: How do science teachers explain science to students? What makes explanations work? Is explaining science just an art, or can it be described, taught, and learned? That is the question posed by this book. From extensive classroom observations, the authors give vivid descriptions of how teachers explain science to students and provide their account with a sound theoretical basis. Attention is given to the ways in which needs for explanation are generated, how the strange new entities of science, from genes to electrons, are created through talk and action, how knowledge is transformed to become explainable, and how demonstrations link explanation and reality. Different styles of explanation are illustrated, from the teller of tales to those who ask students to say it my way. *Explaining Science in the Classroom* is a new and exciting departure in science education. It brings together science educators and specialists in discourse and communication to reach a new synthesis of ideas. The book offers science teachers very practical help and insight.

*Teaching Science in Diverse Classrooms* Douglas B. Larkin, 2025-05-29 As a distinctive voice in science education writing, Douglas B. Larkin provides a fresh perspective for science teachers working to make real science accessible to all K-12 students. Through compelling anecdotes and vignettes, this book draws on research to present a vision of successful and inspiring science teaching that builds upon the prior knowledge, experiences, and interests of students. With empathy for the challenges faced by contemporary science teachers, *Teaching Science in Diverse Classrooms* encourages teachers to embrace the intellectual task of engaging their students in learning science and offers an abundance of examples of what high-quality science teaching for all students can look like. This updated and expanded second edition includes more attention to teaching and learning science in a world changed by the pandemic and reaffirms the importance of attending to equity and justice in science classrooms. Divided into four sections, this book centers around the idea that the decisions made by good science teachers help light the way for their students along both familiar and unfamiliar pathways to understanding. The book addresses topics and issues that occur in the daily lives and career arcs of science teachers, such as: Aiming for culturally relevant science teaching; Eliciting and working with students' ideas; Reshaping school science with scientific practices; Viewing science teachers as science learners; Teaching science in turbulent times. Grounded in the Next Generation Science Standards (NGSS), this is a perfect resource for both pre-service and in-service teachers and teacher educators that addresses the intellectual challenges of teaching science in contemporary classrooms and models how to enact effective, reform-based science teaching practices for all students.
