**Volume I** Cláudio M. Gomes, Wolfgang Hoyer, Jinghui Luo, 2022-02-02      **Novel Developments in Cryo-EM of Biological Molecules** Joachim Frank, 2023-10-06 Cryo EM as it is currently practiced in many laboratories is limited to the visualization of molecules that are in thermal equilibrium at the time before freezing A further limitation is that the existing software does not fully exploit the information that is contained in the images of large ensembles of molecules in thermal equilibrium This book is a collection of recent articles by the author reprinted with introductions and they mainly describe two novel methods in cryo EM one computational and the other experimental that requires the use of a microfluidic device Both methods have the capacity to shed light on the dynamic behavior of biomolecules Combined they greatly expand the range of applications of cryo EM The book describes a successful approach in which based on cryo EM data all states visited by the molecule in thermal equilibrium are mapped by manifold embedding a method of geometric machine learning and the energy landscape of the molecule is derived It also discusses methods and biological results of time resolved cryo EM following a reaction in a non equilibrium system over a short period of time and resulting in the capture of short lived states that have been inaccessible by standard methods of cryo EM      The Bacterial Cell: Coupling between Growth, Nucleoid Replication, Cell Division and Shape Arie Zaritsky, Conrad L. Woldringh, Jaan Männik, 2016-05-02 Bacterial Physiology was inaugurated as a discipline by the seminal research of Maal e Schaechter and Kjeldgaard published in 1958 Their work clarified the relationship between cell composition and growth rate and led to unravel the temporal coupling between chromosome replication and the subsequent cell division by Helmstetter et al a decade later Now after half a century this field has become a major research direction that attracts interest of many scientists from different disciplines The outstanding question how the most basic cellular processes mass growth chromosome replication and cell division are inter coordinated in both space and time is still unresolved at the molecular level Several particularly pertinent questions that are intensively studied follow a what is the primary signal to place the Z ring precisely between the two replicating and segregating nucleoids b Is this coupling related to the structure and position of the nucleoid itself c How does a bacterium determine and maintain its shape and dimensions Possible answers include gene expression based mechanisms self organization of protein assemblies and physical principles such as micro phase separations by excluded volume interactions diffusion ratchets and membrane stress or curvature The relationships between biochemical reactions and physical forces are yet to be conceived and discovered This e book discusses the above mentioned and related questions The book also serves as an important depository for state of the art technologies methods theoretical simulations and innovative ideas and hypotheses for future testing Integrating the information gained from various angles will likely help decipher how a relatively simple cell such as a bacterium incorporates its multitude of pathways and processes into a highly efficient self organized system The knowledge may be helpful in the ambition to artificially reconstruct a simple living system and to develop new antibacterial drugs      *New Antimicrobial Peptides From Bacteria/Invertebrate Obligate Symbiotic Associations* András Fodor, Eustachio Tarasco, Selcuk Hazir, David

*Infections in Surgery* Massimo Sartelli,Raul Coimbra,Leonardo Pagani,Kemal Rasa,2021-01-29 Although most clinicians are aware of the problem of antimicrobial resistance most also underestimate its significance in their own hospital The incorrect and inappropriate use of antibiotics and other antimicrobials as well as poor prevention and poor control of infections are contributing to the development of such resistance Appropriate use of antibiotics and compliance with infection prevention and control measures should be integral aspects of good clinical practice and standards of care However these activities are often inadequate among clinicians and there is a considerable gap between the best evidence and actual clinical practice In hospitals cultural determinants influence clinical practice and improving behaviour in terms of infection prevention and antibiotics prescribing practice remains a challenge Despite evidence supporting the effectiveness of best practices many clinicians fail to implement them and evidence based processes and practices that are known to optimize both the prevention and the treatment of infections tend to be underused Addressing precisely this problem this volume offers an essential toolkit for all surgeons and intensivists interested in improving their clinical practices
