Engineers are also increasingly turning to design and verification models based on C/C++ and SystemC in order to build more abstract higher performance hardware and software models and to escape the limitations of RTL HDLs. This new book, *Advanced Verification Techniques*, provides specific guidance for these advanced verification techniques. The book includes realistic examples and shows how SystemC and SCV can be applied to a variety of advanced design and verification tasks.

Stuart Swan *Population Biobank Studies: A Practical Guide* Zhengming Chen, 2020-12-09 This book describes some of the key epidemiological principles, scientific approaches and quality assurance frameworks required to design and conduct biobank studies in various settings. Using examples from contemporary biobanks, the book addresses the design features and practical procedures needed in order to launch and manage biobank studies, including consent and regulatory approval, the organisation of field work, management of data and biological samples, follow up and verification of disease outcomes, development of IT systems for data collection, quality assurance and study management. Over the last two decades, several large biobank studies have been initiated in different populations intended to greatly enhance the development of precision medicine. Contemporary biobank studies are extremely large and complex and involve several decades of follow up. Such studies pose major challenges in terms of ensuring rapid recruitment, obtaining high quality data, minimising loss to follow up, reliably classifying disease outcomes and optimising the use of the biological samples collected. In this regard, the key to success lies not in planning the perfect study but in planning the most appropriate, reliable, sustainable and future proof study given the practical constraints of available resources, time and capacity. The authors of this handbook are epidemiologists, clinicians, software engineers and laboratory and data scientists with extensive experience in conducting large biobank studies. The eight chapters can be read separately or together and provide readers with essential information on how to design, implement and manage these studies. The state of the art, innovative and scalable approaches and methodologies presented here are intended to stimulate the development of further population based and hospital based biobank studies in diverse populations.
