Data was acquired during testing using non-intrusive sensors vehicle network information and facilities equipment emissions and dynamometer data. Standard drive cycles performance cycles steady state cycles and A/C usage cycles were tested. Much of this data is openly available for download in ANL's Downloadable Dynamometer Database D3. The major results are shown here in this report. Given the preliminary nature of this assessment the majority of the testing was done over standard regulatory cycles and seeks to obtain a general overview of how the vehicle performs. These cycles include the US FTP cycle Urban and Highway Fuel Economy Test cycle as well as the US06 a more aggressive supplemental regulatory cycle. Data collection for this testing was kept at a fairly high level and includes emissions and fuel measurements from an exhaust emissions bench high voltage and accessory current and voltage from a DC power analyzer and CAN bus data such as engine speed engine load and electric machine operation when available. The following sections will seek to explain some of the basic operating characteristics of the MY2010 Insight.
