Gregory N. Brown | Mark J. Holt

FIFTH EDITION

Greg Brown's love of flying is obvious to all who follow his popular *Flying Carpet* podcast or long-running *Flying Carpet* column in *ADPA Flight Training* magazine. The

author of four other books, including *The Savy Flight Instructor* and *Flying Carpet: The Soul of an Alpinist*, Greg's awards include the 2000 National Flight Instructor of the Year, Flight Instructor Hall of Fame, and FAA's Wright Brothers Master Pilot Award. Greg holds an ATP Certificate with Boeing 737 type rating and Flight Instructor Certificate with all fixed-wing aircraft ratings.

Mark J. Holt, a captain for a major airline who has logged more than 23,000 hours in over 40 years of flying, holds an ATP Certificate with Boeing

757/767, Airbus 319/320/321, and BAE Jetstream 41 type ratings and a Flight Engineer (turbojet) as well as flight/ground instructor certificates. His professional aviation career includes extensive flight and ground instructing experience and service as a check airman for a large regional airline. Mark is also co-author of *Air Carrier Operations*.

## Everything a pilot is expected to know when transitioning to turbine-powered aircraft.

Whether you're preparing for a turbine aircraft ground school, studying for your Airline Transport Pilot (ATP) certificate, priming for a corporate or airline interview, or upgrading into a personal jet or turboprop—*The Turbine Pilot's Flight Manual* is for you. With precision and humor, authors Greg Brown and Mark Holt cover all the basics for turbine pilot operations, clearly explaining the differences between turbine aircraft and their piston engine counterparts.

This manual clarifies the complex topics of turbine aircraft engines and all major jet and turboprop power and airframe systems. It also addresses high-speed aerodynamics, automation, wake turbulence, high-altitude and adverse weather, air carrier operations, transport airplane performance, and flight deck professionalism and leadership. You'll be introduced to state-of-the-art flight deck instrumentation including flight management systems, global navigation (GPS/RNAV/RNP), and head-up guidance systems. Learn the operating principles of hazard avoidance systems, including weather radar, enhanced ground proximity warning systems, predictive wind shear systems, advanced communication procedures and equipment (datalink and ADS-B), and the latest engine performance management techniques.

This fifth edition incorporates new material addressing the many recent electronic flight bag (EFB) developments applicable to professional piloting, identifies all topics required for completing an ATP Certification Training Program (ATP-CTP), and adds technology and terminology updates. Includes a glossary of airline and corporate aviation terminology, handy turbine pilot rules-of-thumb, and a comprehensive turbine aircraft "Spotter's Guide."

*The Turbine Pilot's Flight Manual* introduces all the principles and links required to "talk turbine." Many airlines and corporate flight departments recommend reading it before interviewing and prior to attending ground school.

Key Dismukes,Benjamin A. Berman,Loukia Loukopoulos,2017-03-02 Why would highly skilled well trained pilots make errors that lead to accidents when they had safely completed many thousands of previous flights The majority of all aviation accidents are attributed primarily to human error but this is often misinterpreted as evidence of lack of skill vigilance or conscientiousness of the pilots The Limits of Expertise is a fresh look at the causes of pilot error and aviation accidents arguing that accidents can be understood only in the context of how the overall aviation system operates The authors analyzed in great depth the 19 major U S airline accidents from 1991 2000 in which the National Transportation Safety Board NTSB found crew error to be a causal factor Each accident is reviewed in a separate chapter that examines events and crew actions and explores the cognitive processes in play at each step The approach is guided by extensive evidence from cognitive psychology that human skill and error are opposite sides of the same coin The book examines the ways in which competing task demands ambiguity and organizational pressures interact with cognitive processes to make all experts vulnerable to characteristic forms of error The final chapter identifies themes cutting across the accidents discusses the role of chance criticizes simplistic concepts of causality of accidents and suggests ways to reduce vulnerability to these catastrophes The authors complementary experience allowed a unique approach to the study accident investigation with the NTSB cognitive psychology research both in the lab and in the field

enormous first hand experience of piloting and application of aviation psychology in both civil and military operations This combination allowed the authors to examine and explain the domain specific aspects of aviation operations and to extend advances in basic research in cognition to complex issues of human performance in the real world Although *The Limits of Expertise* is directed to aviation operations the implications are clear for understanding the decision processes skilled performance and errors of professionals in many domains including medicine
