Advanced Calculus

An authorised release of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revised but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R. Courant, *Calculus* by T. Apostol, *Calculus* by M. Spivak, and *Pure Mathematics* by G. Hardy. The reader should also have some experience with partial derivatives. Its overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

Mathematics for Machine Learning

Distills key concepts from linear algebra, geometry, matrices, calculus, optimization, probability and statistics that are used in machine learning.

New General Mathematics for Junior Secondary Schools

This well-established series, the most popular in Nigeria, has been fully revised to reflect recent developments in mathematics education at junior secondary level and the views of the many users of the books. It has especially been revised to fully cover the requirements of the new NERDC Universal Basic Education Curriculum.

Partial Differential Equations

Our understanding of the fundamental processes of the natural world is based to a large extent on partial differential equations (PDEs). The second edition of *Partial Differential Equations* provides an introduction to the basic properties of PDEs and the ideas and techniques that have proven useful in analyzing them. It provides the student a broad perspective on the subject, illustrates the incredibly rich variety of phenomena encompassed by it, and imparts a working knowledge of the most important techniques of analysis of the solutions of the equations. In this book mathematical jargon is minimized. Our focus is on the three most classical PDEs: the wave, heat and Laplace equations. Advanced concepts are introduced frequently but with the least possible technicalities. The book is flexibly designed for juniors, seniors or beginning graduate students in science, engineering or mathematics.

Stochastic Processes, Physics And Geometry Ii - Proceedings Of The Iii International Conference Sergio Albeverio, D Merlini, U Cattaneo, 1995-02-17 As was already evident from the previous two meetings the theory of stochastic processes the study of geometrical structures and the investigation of certain physical problems are inter related In fact the trend in recent years has been towards stronger interactions between these areas As a result a large component of the contributions is concerned with the theory of stochastic processes quantum theory and their relations Numerical Geometry, Grid Generation and Scientific Computing Vladimir A. Garanzha, Lennard Kamenski, Hang Si, 2021-09-25 The focus of these conference proceedings is on research development and applications in the fields of numerical geometry scientific computing and numerical simulation particularly in mesh generation and related problems In addition this year's special focus is on Delaunay triangulations and their applications celebrating the 130th birthday of Boris Delaunay In terms of content the book strikes a balance between engineering algorithms and mathematical foundations It presents an overview of recent advances in numerical geometry grid generation and adaptation in terms of mathematical foundations algorithm and software development and applications The specific topics covered include quasi conformal and quasi isometric mappings hyperelastic deformations multidimensional generalisations of the equidistribution principle discrete differential geometry spatial and metric encodings Voronoi Delaunay theory for tilings and partitions duality in mathematical programming and numerical geometry mesh based optimisation and optimal control methods Further aspects examined include iterative solvers for variational problems and algorithm and software development The applications of the methods discussed are multidisciplinary and include problems from mathematics physics biology chemistry material science and engineering

Algebraic Geometry Mr. Rohit Manglik, 2024-07-26 Introduces concepts of varieties schemes and morphisms in abstract geometric spaces **Composite Materials** Roderick H. Martin, 1986 *Lectures on Nonsmooth Differential Geometry* Nicola Gigli, Enrico Pasqualetto, 2020-02-10 This book provides an introduction to some aspects of the flourishing field of nonsmooth geometric analysis In particular a quite detailed account of the first order structure of general metric measure spaces is presented and the reader is introduced to the second order calculus on spaces known as RCD spaces satisfying a synthetic lower Ricci curvature bound Examples of the main topics covered include notions of Sobolev space on abstract metric measure spaces normed modules which constitute a convenient technical tool for the introduction of a robust differential structure in the nonsmooth setting first order differential operators and the corresponding functional spaces the theory of heat flow and its regularizing properties within the general framework of infinitesimally Hilbertian metric measure spaces the RCD condition and its effects on the behavior of heat flow and second order calculus on RCD spaces The book is mainly intended for young researchers seeking a comprehensive and fairly self contained introduction to this active research field The only prerequisites are a basic knowledge of functional analysis measure theory and Riemannian geometry

Applications of Computational Algebraic Geometry David A. Cox, Dinesh N. Manocha, 1998 This book introduces readers to key ideas and applications of computational algebraic geometry Beginning with the discovery of Gröbner bases and fueled by the advent of modern computers and the rediscovery of resultants computational algebraic geometry has grown rapidly in importance The fact that crunching equations is now as easy as crunching numbers has had a profound impact in recent years At the same time the mathematics used in computational algebraic geometry is unusually elegant and accessible which makes the subject easy to learn and easy to apply This book begins with an introduction to Gröbner bases and resultants then discusses some of the more recent methods for solving systems of polynomial equations A sampler of possible applications follows including computer aided geometric design complex information systems integer programming and algebraic coding theory The lectures in this book assume no previous acquaintance with the material

Quantum Geometry Margaret Prugovecki, 2013-03-14 This monograph presents a review and analysis of the main mathematical physical and epistemological difficulties encountered at the foundational level by all the conventional formulations of relativistic quantum theories ranging from relativistic quantum mechanics and quantum field theory in Minkowski space to the various canonical and covariant approaches to quantum gravity It is however primarily devoted to the systematic presentation of a quantum framework meant to deal effectively with these difficulties by reconsidering the foundations of these subjects analyzing their epistemic nature and then developing mathematical tools which are specifically designed for the elimination of all the basic inconsistencies A carefully documented historical survey is included and additional extensive notes containing quotations from original sources are incorporated at the end of each chapter so that the reader will be brought up to date with the very latest developments in quantum field theory in curved spacetime quantum

gravity and quantum cosmology The survey further provides a backdrop against which the new foundational and mathematical ideas of the present approach to these subjects can be brought out in sharper relief

Reconstructive Integral Geometry Victor Palamodov, 2012-12-06 One hundred years ago 1904 Hermann Minkowski 58 posed a problem to re 2 construct an even function I on the sphere S^2 from knowledge of the integrals $M(C)$ of I over big circles C Paul Funk found an explicit reconstruction formula for I from data of big circle integrals Johann Radon studied a similar problem for the Euclidean plane and space The interest in reconstruction problems like Minkowski Funk's and Radon's has grown tremendously in the last four decades stimulated by the spectrum of new modalities of image reconstruction These are X ray MRI gamma and positron radiography ultrasound seismic tomography electron microscopy synthetic radar imaging and others The physical principles of these methods are very different however their mathematical models and solution methods have very much in common The umbrella name reconstructive integral geometry is used to specify the variety of these problems and methods The objective of this book is to present in a uniform way the scope of well known and recent results and methods in the reconstructive integral geometry We do not touch here the problems arising in adaptation of analytic methods to numerical reconstruction algorithms We refer to the books 61 62 which are focused on these problems Various aspects of interplay of integral geometry and differential equations are discussed in Chapters 7 and 8 The results presented here are partially new
