

Unit 1
MODULE

3

HEAT AND TEMPERATURE

In Grade 7, students learned about the conditions necessary for heat transfer to occur and the ways by which *heat* transfers from one place to another. This time, they will explore what happens to the object when *heat* is transferred to or from it. They will also learn about the factors that affect the amount of *heat* that an object can transfer. Students are also expected to understand the difference between *heat* and temperature. Furthermore, this module hopes to address the following misconceptions on *heat* and temperature:

1. *Heat* is a substance.
2. *Heat* is not energy.
3. *Heat* and temperature are one and the same.
4. The temperature of an object depends on its size or volume.
5. The amount of *heat* transferred is determined always by the change in temperature.

Key questions for this module

What happens to solids, liquids, or gases when they absorb or release *heat*?

Does *heat* affect all kinds of materials in the same way?

Are *heat* and temperature one and the same?

Notes:

- This module is good for 6 days. The experiments were made simple so that students will be able to finish them early and the discussion of the results can be done also on the same day.

Test Ready Science 8 Teachers Guide
