Electronic Systems and Aircraft Digital Electronic and Computer Systems **Automated Systems in the Aviation and Aerospace Industries** Shmelova, Tetiana, Sikirda, Yuliya, Rizun, Nina, Kuchеров, Dmytro, Dergachov, Konstantin, 2019-03-22

Air traffic controllers need advanced information and automated systems to provide a safe environment for everyone traveling by plane. One of the primary challenges in developing training for automated systems is to determine how much a trainee will need to know about the underlying technologies to use automation safely and efficiently. To ensure safety and success, task analysis techniques should be used as the basis of the design for training in automated systems in the aviation and aerospace industries. *Automated Systems in the Aviation and Aerospace Industries* is a pivotal reference source that provides vital research on the application of underlying technologies used to enforce automation safety and efficiency. While highlighting topics such as expert systems, text mining, and human-machine interface, this publication explores the concept of constructing navigation algorithms based on the use of video information and the methods of the estimation of the availability and accuracy parameters of satellite navigation. This book is ideal for aviation professionals, researchers, and managers seeking current research on information technology used to reduce the risk involved in aviation.

Bird Strike in Aviation
Ahmed F. El-Sayed, 2019-07-22

Groundbreaking Handbook Offers Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard. Though annual damages from bird and bat collisions with aircraft have been estimated at 400 million in the United States and up to 1.2 billion in commercial aviation worldwide, and despite numerous conferences and councils dedicated to the issue, very little has been published on this expensive and sometimes lethal flying risk. *Bird Strike in Aviation* seeks to fill this gap, providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough and comprehensive examination of the subject, Dr. El-Sayed offers different approaches to reducing bird strikes, including detailed coverage of the three categories necessary for such reduction: namely, awareness, education, bird management, active and passive control, and aircraft design. In addition, the text discusses the importance of cooperation between airplanes, airports, and air traffic authorities, as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include statistics and analyses for bird strikes with both civil and military helicopters, as well as military fixed-wing aircrafts, including annual costs, critical flight altitudes, critical parts of aircraft, distance from air base, and specifics of date and timing. Thorough review and analysis of all fatal bird strike accidents and most non-fatal accidents since 1905, the first book to provide such a reference. The use of numerical methods in analyzing historic data, ex-probability functions, finite element methods for analyzing impact on aircraft structure, experimental measurement technique for displacement, vibration, component distortion, etc. Instruction on identification of bird species using visual, microscopic, and DNA evidence, and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision. With its wealth of statistical data, innovative research, and practical suggestions, *Bird Strike in Aviation* will prove a vital resource for researchers, engineers, and graduate students in aerospace.
