the same time particular to pain setting it apart from other bodily sensations This applies irrespective of whether we consider the psychological dimensions neural networks causal relations or biological functions of pain Consequently it is impossible to refer to ideal far reaching and ideal distinct generalizations on the matter of pain ii Despite this challenge by focusing on the resemblance relations that hold across pains we can generate scientific progress in explaining predicting and treating pain In doing so the book aims to provide a clear conceptual basis for interdisciplinary communication and a useful heuristic for future research
