Abstract—The purpose of this study was to determine the effect of a 10-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 10-week training program that included aerobic, strength, and flexibility exercises. Physical fitness was measured using a series of tests, including a 1000-meter run, a 1-minute sit-up test, a 1-minute plank test, and a 1-minute push-up test. The results showed that the experimental group had significantly higher scores than the control group in all four tests after the 10-week training program. The findings suggest that a 10-week training program can improve the physical fitness of 10-year-old children.
