Applications of Coastal Remote Sensing Kevin Ross Turpie, Tiffany Kay Moisan, Kristin B. Byrd, Steven G. Ackleson, 2021-06-01
IN MEMORIAL This Research Topic is dedicated to our co editor Dr Tiffany Moisan a well regarded ocean color remote sensing scientist who unexpectedly passed away during its preparation Dr Moisan was a dear friend and upbeat and enthusiastic colleague and a scientist committed to the use of remote sensing to improve our understanding of marine microbiology and phytoplankton ecology She was a strong supporter of the development of remote sensing capabilities and applications for coastal and inland waters and we know that she would have wanted this Research Topic to provide her colleagues an opportunity to share and promote their work in this area A voice in our community is now quiet Let the chorus of our shared song continue with her memory Dr Tiffany Moisan is survived by her loving family including her husband Dr John Moisan and her two daughters *Pushing Frontiers - Imaging For Photon Science* Jiaguo Zhang, Iain

Sedgwick, Cornelia B. Wunderer, 2024-12-24 Developments of cutting edge X ray imaging detectors are largely driven by experiments at the large photon science facilities i e the synchrotron radiation sources and free electron lasers FELs which enable a wealth of investigations in physics material science biology chemistry environmental sciences and beyond The next generation radiation sources namely diffraction limited storage rings DLSR and high repetition rate FELs operated in the continuous wave CW mode not only offer brilliant opportunities for research but also pose new challenges and requirements for the X ray detectors required to exploit them fully Examples include the high count rate capability required at the DLSRs the ultra high continuous frame rate and data throughput at the FELs and a broad photon energy range from tens of eV to hundreds of keV spanned by the facilities In order to meet the new requirements posed by the most advanced photon science facilities envisioned or already under development around the world today various novel photon detection and imaging concepts are being investigated and detector technologies are advancing fast The goal of this research topic is to address the challenges and discuss the critical problems encountered in imaging systems for photon science including but not limited to sensing materials ASICs readout electronics detector systems and data reduction Moreover it will encompass a discussion of the development strategies technological advances and recent achievements of each subject thereby facilitating the realization of complete concepts for novel imaging systems as well as further developments of individual detector technologies Radioactivity Michael F.
