### A Theme Park

The park supervisor records data on the number of tickets sold for the six rides at the park each year.

Ride	Tickets Sold
Silly Swings	20,780
The Tilted Tower	178,982
Spin and Win	274,009
Spirity Spiral	300,000
River Rapid	68,710
Roaring Roller Coaster	30,400

Find the value of the hundred thousands place for the Spirity Spiral. How is the value of the digit in the hundred thousands place different than the value of the digit in the thousands place?

---

---

---

For which ride does the number of tickets sold have a 5 in the greatest place value? Explain how you know.

---

---

---

Compare the number of tickets sold for The Tilted Tower and the River Rapid. Write a number sentence using  $>$ ,  $=$  or  $<$ . Explain your answer.

**Understanding Instructionally Useful Assessment** Carla Evans,Scott Marion,2024-06-19 Understanding Instructionally Useful Assessment offers new insights into how various types of assessments from the state to the classroom will differ in their usefulness for supporting instructional decision making and student learning In order to most effectively serve students it is essential that educators avoid conflating the assessment information that teachers use for instructional purposes and the data that leaders and administrators use for evaluative or monitoring purposes This book provides classroom teachers as well as school and district leaders with a clear conception of what makes assessments their purpose design reporting and resulting information useful or not for informing instruction and how they can select assessment tools suited to specific purposes Each chapter addresses the knowledge and skills that K 12 staff need in order to challenge claims made by policymakers test vendors or even other educators that any assessment can be used to inform instruction Educators will come away better prepared to remove unnecessary or redundant assessments from their systems and to create structures policies and processes that best support the instructional usefulness of assessments for student learning

*Linguistic Influences on Mathematical Cognition* Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing **Mathematical and**

**Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives** Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research
