

## PLANT REPRODUCTION

### Reproduction in Gymnosperms

Gymnosperms are seed-bearing plants that do not produce flowers and fruits. They have a long life span and are often found in temperate and boreal regions of the world. The male and female reproductive organs are separate.

The male reproductive organ is the strobili, which are small, cone-like structures that produce pollen. The female reproductive organ is the ovule, which is a small, seed-like structure that produces the egg. The male and female strobili are often found on the same plant.

The male strobili are often found in clusters at the base of the plant. The female strobili are often found in clusters at the tip of the plant. The male and female strobili are often found on the same plant.
