**of the Upper Midwest** Elizabeth J. Czarapata, 2005-08-29 *Invasive Plants of the Upper Midwest* is an informative colorful comprehensive guide to invasive species that are currently endangering native habitats in the region. It will be an essential resource for land managers, nature lovers, property owners, farmers, landscapers, educators, botanists, foresters, and gardeners. Invasive plants are a growing threat to ecosystems everywhere. Often originating in distant climes, they spread to woodlands, wetlands, prairies, roadsides, and backyards that lack the biological controls which kept these plant populations in check in their homelands. *Invasive Plants of the Upper Midwest* includes more than 250 color photos that will help anyone identify problem trees, shrubs, vines, grasses, sedges, and herbaceous plants, including aquatic invaders. The text offers further details of plant identification, manual, mechanical, biological, and chemical control techniques, information and advice about herbicides, and suggestions for related ecological restoration and community education efforts. Also included are literature references, a glossary, a matrix of existing and potential invasive species in the Upper Midwest, an index with both scientific and common plant names, advice on state agencies to contact with invasive plant questions, and other helpful resources. The information in this book has been carefully reviewed by staffs of the Wisconsin Department of Natural Resources Bureau of Endangered Resources and the University of Wisconsin-Madison Arboretum and other invasive plant experts. **Wisconsin's Forests, 2004**, 2008 The first full annualized inventory of Wisconsin's forests was completed in 2004 after 6,478 forested plots were visited. There are more than 16.0 million acres of forest land in the Wisconsin; nearly half of the State's land area, 15.8 million acres, meet the definition of timberland. The total area of both forest land and timberland continues an upward trend that began in the 1960s. Red maple, sugar maple, and quaking aspen are the most common trees with diameters at breast height greater than 5 inches; there are 298,250 and 244 million trees of these species, respectively. Aspen is the most common forest type, followed by sugar maple, beech, yellow birch, and white oak, red oak, hickory. This report includes detailed information on forest attributes and health and on agents of change such as the introduction of nonnative plants, insects, and diseases, and changing land use patterns. *The Woody Plant Seed Manual*, United States Forest Service, 2008 *Practical Handbook for Wetland Identification and Delineation* John G. Lyon, Lynn Krise Lyon, 2011-03-21 Wetland identification, although theoretically straightforward, is not cut and dry as a practice. Despite the time and expense, it is an economic and environmental necessity. *The Definitive Guide to the Practice of Wetland Identification*. The second edition of the bestselling *Practical Handbook for Wetland Identification and Delineation* offers solutions. *The Woody Plant Seed Manual, Agriculture Handbook 727*, July 2008, 2009 **A Field Guide to Identification of Minnesota Aquatic Plants** Mary Blickenderfer, 2007 *Landscaping with Native Plants of Wisconsin* Lynn M. Steiner, Aimed at beginners and veteran gardeners alike, this book is designed to help Wisconsin gardeners find and maintain the best native species for their specific sites, however modest or lavish. Gardening with native plants is an ever more popular practice, and for good reason.
