Study Guide to Accompany Biology: Life on Earth by Teresa Audesirk and Gerald Audesirk David J. Cotter,1986 **Anaerobic Digestion** Gavin Collins,Eric D. van Hullebusch,Giovanni Esposito,Cynthia Carliell-Marquet,Fernando G. Fermoso,2018-11-27 Anaerobic digestion AD is a naturally occurring biological process in soils sediments ruminants and several other anoxic environments that cycles carbon and other nutrients and converts organic matter into a methane rich gas As a biotechnology AD is now well established for the treatment of the organic fraction of various waste materials including wastewaters but is also increasingly applied for an expanding range of organic feedstocks suitable for biological conversion to biogas AD applications are classified in various ways including on the basis of bioreactor design and operating parameters such as retention time temperature pH total solids TS and volatile solids VS contents and biodegradability of substrates AD is an attractive bioenergy and waste wastewater treatment technology The advantages of AD for waste treatment include production of a useable fuel biogas methane possibility of high organic loading reduced carbon footprint and suitability for integration into a wide variety of process configurations and scales Specifically two important and developing applications exemplify the potential of AD technologies 1 the integration of AD as the basis of the core technologies underpinning municipal wastewater and sewage treatment to displace less sustainable and more energy intensive aerobic biological treatment systems in urban water infrastructures and 2 technical innovations for higher rate conversions of high solids wastestreams and feedstocks for the production of energy carriers i e methane biogas but possibly also biohydrogen and other industrially relevant intermediates such as organic acids Internationally the research

effort to maximize AD biogas yield has increased ten fold over the past decade Depending on the feedstocks bioreactor design and process parameters fundamental and applied knowledge are still required to improve conversion rates and biogas yields This Research Topic cover aspects related to AD processes such as the effect of feedstock composition as well as the effect of feedstock pre treatment bioreactor design and operating modes on process efficiency microbial community dynamics and systems biology influence of macro and micro nutrient concentrations and availability process control upgrading and calibration of anaerobic digestion models e g ADM1 considering the biochemical routes as well as the hydrodynamics in such ecosystems and novel approaches to process monitoring such as the development and application of novel and rapid diagnostic assays including those based on molecular microbiology Detailed full scale application studies were also particularly welcomed

Far from Equilibrium: An archaeology of energy, life and humanity Michael J. Boyd, Roger C. P. Doonan, 2021-03-03 Archaeology is in crisis Spatial turns material turns and the ontological turn have directed the discipline away from its hard won battle to find humanity in the past Meanwhile popularised science camouflaged as archaeology produces shock headlines built on ancient DNA that reduce humanity s most intriguing historical problems to two dimensional caricatures Today archaeology finds itself less able than ever to proclaim its relevance to the modern world This volume foregrounds the relevance of the scholarship of John Barrett to this crisis Twenty four writers representing three generations of archaeologists scrutinise the current turmoil in the discipline and highlight the resolutions that may be found through Barrett s analytical framework Topics include archaeology and the senses the continuing problem of the archaeological record practice discourse and agency reorienting archaeological field practice the question of different expressions of human diversity and material ecologies Understanding archaeology as both a universal and highly specific discipline case studies range from the Aegean to Orkney and encompass Anatolia Korea Romania United Kingdom and the very nature of the Universe itself This critical examination of John Barrett s contribution to archaeology is simultaneously a response to his urgent call to arms to reorient archaeology in the service of humanity

Handbook of Research on Algae as a Sustainable Solution for Food, Energy, and the Environment El-Sheekh, Mostafa M., Abdullah, Norhayati, Ahmad, Imran, 2022-06-03 Today s planet faces several critical problems such as resource depletion environmental destruction and climate change that affect all areas of life as we know it Figuring out how to address these issues and prioritizing Earth s health has been at the forefront of study as it is a key issue that affects us all One element that requires further investigation is algae regarding its potential for creating a more sustainable future across the food energy and environmental sectors The Handbook of Research on Algae as a Sustainable Solution for Food Energy and the Environment provides insight into the biotechnological and biorefinery aspects of algae together with their unique applications in the agriculture and pharmaceutical industry Furthermore this book considers the biological and biotechnological processes happening in the cultivation and harvesting of algae DNA sequencing and genomics of algae

Moreover it examines the bio remediation aspects of algae and its utilization to produce biofuels methane hydrogen and other useful renewable sources of energy thereby contributing to environmental sustainability Covering topics such as cell biology and food science this reference work is ideal for academicians researchers industry professionals scholars practitioners instructors and students Richard Buckminster Fuller Basic Biography R. Buckminster Fuller,1973 R Buckminster Fuller kept a basic biography at his office for official purposes This is that document *Energy for Animal Life* R. McNeill Alexander,1999-01-28 The Oxford Animal Biology Series is an innovative new series of supplementary undergraduate texts in comparative animal biology Topics within each book are addressed using examples from throughout the animal kingdom looking for parallels that transcend taxonomy Further reading sections will guide the student into the literature at greater depth The series will be international in scope both in terms of the species used as examples and in references to scientific work *Energy for Animal Life* the first book in the series is about how animals get energy and how they use it a central topic in our understanding of animal biology Life depends on energy and much of the activity of animals is devoted to getting the food which is their energy source It encompasses the food chain from solar radiation and photosynthesis to food sources for herbivores and for carnivores and compares the merits of different designs of digestive system and of different strategies for finding and choosing food Of course animal energy isn't simply a question of feeding and several chapters in turn look at energy use The energy costs of motion of running swimming and flight are discussed in one chapter and the energetic demands of growth and reproduction in another A chapter on body temperature shows how the processes of life go faster at higher temperatures and discusses how animals regulate their temperature A final chapter draws all of these aspects of energy use together and considers the energy budgets of several different animals assessing the different energy gains and costs of their everyday activities in the wild The book is truly comparative drawing on examples from a wide range of animal species and lots of practical information on relevant experiments is included The style is very accessible and suitable as supplementary reading for first and second year undergraduates taking a degree course in biological sciences **Monthly Catalog of United States Government Publications** ,1982 Applications of Radioisotopes and Radiation in the Life Sciences United States.
