Medical and Surgical Journal, 1861 **Neurodevelopmental Pediatrics** David D. Eisenstat, Dan Goldowitz, Tim F. Oberlander, Jerome Y. Yager, 2023-02-22. This book explores the interrelationship of genetics, the environment, or both in the causation of three neurodevelopmental disorders: autism spectrum disorder (ASD), fetal alcohol spectrum disorder (FASD), and cerebral palsy (CP). It links common clinical problems in developmental pediatrics and pediatric neurology to current concepts and translational research advances in developmental neurosciences, medical genetics, and related disciplines. The first section of the book provides a comprehensive and up to date overview of development of the brain, including topics such as neuronal stem cells, epigenetics, and the influence of the prenatal environment. The next three sections analyze the epidemiology, diagnosis, interventions, and controversies, and research directions associated with each of the three neurodevelopmental disorders. It also examines comorbidities common to all three disorders, such as disturbed sleep, seizures, behavioral disorders, and pain. It concludes by highlighting the impact of ASD, FASD, and CP on family dynamics and provides tools and resources based on foundational concepts such as neuroethics, bioinformatics, community engagement, and advocacy. Learning objectives, key points, clinical vignettes, and multiple choice questions are incorporated throughout the book. With its comprehensive treatment of disease mechanisms, genetics, and pathophysiology associated with these disorders, and its discussion of potential therapies and novel treatments, *Neurodevelopmental Pediatrics: Genetic and Environmental Influences* is an essential resource for developmental pediatricians, child neurologists, fellows, residents, and graduate students. Medical subject headings **Structure and Evolution of Invertebrate Nervous Systems** Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17. The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement, behavior, and coordinated thinking. Invertebrate neurobiology has traditionally been studied in specific model organisms, whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention. This is the first major reference work in the field for 50 years, bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and

authoritative overview for a new generation of researchers Presented in full colour throughout Structure and Evolution of Invertebrate Nervous Systems synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology zoology phylogeny and evolution
