Review Kjelstrup 1 Ntnu:

Physics of Porous Media Dick Bedeaux, Eirik G. Flekkøy, Alex Hansen, Signe Kjelstrup, Knut Jørgen Måløy, Ole Torsaeter, 2020-03-03 **Experimental Thermodynamics Volume X** Dick Bedeaux, Signe Kjelstrup, Jan V. Sengers, 2016
Covering recent developments in the theory of non equilibrium thermodynamics and its applications this title is aimed at a predominantly but not exclusively academic audience of practitioners of thermodynamics and energy conversion

Micro-Optics and Energy Jacob J. Lamb, Bruno G. Pollet, 2020-06-11 This book provides a brief research source for optical fiber sensors for energy production and storage systems discussing fundamental aspects as well as cutting edge trends in sensing This volume provides industry professionals researchers and students with the most updated review on technologies and current trends thus helping them identify technology gaps develop new materials and novel designs that lead to commercially viable energy storage systems *Perspectives on Industrial Ecology* Dominique Bourg, Suren Erkman, 2017-09-29 Business as usual in terms of industrial and technological development even if based on a growing fear of pollution and shortages of natural resources will never deliver sustainable development However the growing interest in recent years in the new science of industrial ecology IE and the idea that industrial systems should mimic the quasi cyclical functions of natural ecosystems in an industrial food chain holds promise in addressing not only short term environmental problems but also the long term holistic evolution of industrial systems This possibility requires a number of key conditions to be met not least the restructuring of our manufacturing and consumer society to reduce the effects of material and energy flows at the very point in history when globalisation is rapidly increasing them This book sets out to address the theoretical considerations that should be made implicit in future research as well as practical implementation options for industry The systematic recovery of industrial wastes the minimisation of losses caused by dispersion the dematerialisation of the economy the requirement to decrease our reliance on fuels derived from hydrocarbons and the need for management systems that help foster inter industry collaboration and networks are among the topics covered The book is split into four sections First the various definitions of IE are outlined Here important distinctions are made between industrial metabolism and IE Second a number of different industrial sectors including glass petroleum and electric power are assessed with regard to the operationalisation of industrial ecology Eco industrial Parks and Networks are also analysed Third the options for overcoming obstacles that stand in the way of the closing of cycles such as the separation and screening of materials are considered and finally a number of implications for the future are assessed The contributions to *Perspectives on Industrial Ecology* come from the leading thinkers working in this field at the crossroads between a number of different disciplines engineering ecology bio economics geography the social sciences and law **2021 Frontiers in Physics Editor's pick** Alex Hansen, 2021-07-22 *Nanoscale Thermodynamics* Signe Kjelstrup, 2021-09-01 This Special Issue concerns the development of a theory for energy conversion on the nanoscale namely nanothermodynamics The theory has been applied to porous

media small surfaces clusters or fluids under confinement The number of unsolved issues in these contexts is numerous and the present efforts are only painting part of the broader picture We attempt to answer the following How far down in scale does the Gibbs equation apply Which theory can replace it beyond the thermodynamic limit It is well known that confinement changes the equation of state of a fluid but how does confinement change the equilibrium conditions themselves This Special Issue explores some of the roads that were opened up for us by Hill with the idea of nanothermodynamics The experimental progress in nanotechnology is advancing rapidly It is our ambition with this book to inspire an increased effort in the development of suitable theoretical tools and methods to help further progress in nanoscience All ten contributions to this Special Issue can be seen as efforts to support enhance and validate the theoretical foundation of Hill
