

Suppose the durations of human pregnancies follow a mound-shaped distribution with a mean of 264 days and a standard deviation of 18 days.

a. Approximately what percentage of human pregnancies last between 246 and 282 days?

1%  %

b. Between what two values will the durations of 95% of all human pregnancies fall? Convert these values to months (with decimals), assuming the typical month has 30 days.

Round your answers to one decimal place. Enter your answers in increasing order.

The durations of 95% of all human pregnancies last between  1.8  and  2.2  months.

Suppose also that the durations of horse pregnancies follow a mound-shaped distribution with a mean of 339 days and a standard deviation of 4 days.

c. Is a horse or a human more likely to have a pregnancy that lasts within 2.8 days of its mean? Explain briefly.

A  horse  is more likely to have a pregnancy that lasts within 2.8 days of its mean because the standard deviation for  horse pregnancies  is  4  days.

**IBM Information Governance Solutions** Chuck Ballard, John Baldwin, Alex Baryudin, Gary Brunell, Christopher Giardina, Marc Haber, Erik A O'Neill, Sandeep Shah, IBM Redbooks, 2014-04-04 Managing information within the enterprise has always been a vital and important task to support the day to day business operations and to enable analysis of that data for decision making to better manage and grow the business for improved profitability To do all that clearly the data must be

accurate and organized so it is accessible and understandable to all who need it That task has grown in importance as the volume of enterprise data has been growing significantly analyst estimates of 40 50% growth per year are not uncommon over the years However most of that data has been what we call structured data which is the type that can fit neatly into rows and columns and be more easily analyzed Now we are in the era of big data This significantly increases the volume of data available but it is in a form called unstructured data That is data from sources that are not as easily organized such as data from emails spreadsheets sensors video audio and social media sites There is valuable information in all that data but it calls for new processes to enable it to be analyzed All this has brought with it a renewed and critical need to manage and organize that data with clarity of meaning understandability and interoperability That is you must be able to integrate this data when it is from within an enterprise but also importantly when it is from many different external sources What is described here has been and is being done to varying extents It is called information governance Governing this information however has proven to be challenging But without governance much of the data can be less useful and perhaps even used incorrectly significantly impacting enterprise decision making So we must also respect the needs for information security consistency and validity or else suffer the potential economic and legal consequences Implementing sound governance practices needs to be an integral part of the information control in our organizations This IBM Redbooks publication focuses on the building blocks of a solid governance program It examines some familiar governance initiative scenarios identifying how they underpin key governance initiatives such as Master Data Management Quality Management Security and Privacy and Information Lifecycle Management IBM Information Management and Governance solutions provide a comprehensive suite to help organizations better understand and build their governance solutions The book also identifies new and innovative approaches that are developed by IBM practice leaders that can help as you implement the foundation capabilities in your organizations
