**Overshoot** William R. Catton, 1982-06 Our day to day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy, natural resources, and consumer goods Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves And for years some biologists have warned us of the direct correlation between scarcity and population growth These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology A calm but unflinching realist Catton suggests that we cannot stop this wave for we have already overshoot the Earth's capacity to support so huge a load He contradicts those scientists, engineers, and technocrats who continue to write optimistically about energy alternatives Catton asserts that the technological panaceas proposed by those who would harvest from the seas, harness the winds, and farm the deserts are ignoring the fundamental premise that the principles of ecology apply to all living things These principles tell us that within a finite system economic expansion is not irreversible and population growth cannot continue indefinitely If we disregard these facts, our sagging American Dream will soon shatter completely

Communication and Aging Jon F. Nussbaum, Loretta L. Pecchioni, James D. Robinson, Teresa L. Thompson, 2013-05-13 This text employs a communication perspective to examine the aging process and the ability of individuals to adapt successfully to aging It continues the groundbreaking work of the first edition, emphasizing a life span approach toward understanding the social interaction that occurs during later life The edition provides a comprehensive update on the existing and emerging research within communication and aging studies and considers such topics as notions of successful aging, positive and negative stereotypes toward older adults, and health communication issues It raises awareness of the barriers facing elderly people in conversation and the importance such conversations have in elderly people's lives The impact of nonrelational processes such as hearing loss are considered as they

impact relationships with others and affect the ability to age successfully The book is organized into 14 chapters Each chapter is written so that the reader is presented with an exhaustive review of the pertinent and recent literature from the social sciences As in the first edition when the literature is empirically based the communicative ramifications are then discussed Readers of this volume will gain greater understanding of the importance of their communicative relationships and how significant they remain across the life span Developed for students in communication psychology nursing social gerontology sociology and related areas Communication and Aging provides important insights on communication to all who are affected by the aging process     **With the World's People: Greece.
