Proceedings of the 9th International Conference on Physical and Mathematical Modelling of Earth and Environmental Processes Vladimir Karev,2024-06-25 This book presents short papers of participants of the 9th International Scientific Conference School for Young Scientists Physical and Mathematical Modeling of Earth and Environment Processes A special focus is given to the extraction of hydrocarbon resources including from unconventional sources An alternative to the use of hydrocarbons as a main source of energy on the Planet in the coming decades is unlikely to be found At the same time the

resource base of hydrocarbons is quickly depleted in particularly large and accessible oil and gas fields The shale oil and gas Arctic hydrocarbon stocks gas hydrates coal bed methane oil and gas from deep horizons can become new sources Deep oil may be the most promising source of expanding the resource base of hydrocarbons according to many experts New technologies are required to their development Efficient low cost technologies can be created on the basis of geomechanical approach i e through the use of a huge elastic energy stored in the rock massif due to rock pressure The creation of new breakthrough approaches to the development of hydrocarbon fields is very important in today s geopolitical conditions and requires the involvement of young minds and strength International activities including the youth scientific schools can become an effective tool for exchange of information and the organizing of interdisciplinary research of processes in geo environment The book presents the new results of the experimental and theoretical modeling of deformation fracture and filtration processes in the rocks in connection to issues of creating scientific fundamentals for new hydrocarbon production technologies The investigations of the dependence of well stability and permeability of rocks on the stress strain state in conditions of deep horizons and high rock pressure are also represented **Mathematics Everywhere** Martin Aigner,Ehrhard Behrends,2010 The authors are renowned mathematicians their presentations cover a wide range of topics From compact discs to the stock exchange from computer tomography to traffic routing from electronic money to climate change they make the math inside understandable and enjoyable *Mathematical Reviews* ,2007 **Mathematical Models for Remote Sensing Image Processing** Gabriele Moser,Josiane Zerubia,2017-11-28 This book maximizes reader insights into the field of mathematical models and methods for the processing of two dimensional remote sensing images It presents a broad analysis of the field encompassing passive and active sensors hyperspectral images synthetic aperture radar SAR interferometric SAR and polarimetric SAR data At the same time it addresses highly topical subjects involving remote sensing data types e g very high resolution images multiangular or multiresolution data and satellite image time series and analysis methodologies e g probabilistic graphical models hierarchical image representations kernel machines data fusion and compressive sensing that currently have primary importance in the field of mathematical modelling for remote sensing and image processing Each chapter focuses on a particular type of remote sensing data and or on a specific methodological area presenting both a thorough analysis of the previous literature and a methodological and experimental discussion of at least two advanced mathematical methods for information extraction from remote sensing data This organization ensures that both tutorial information and advanced subjects are covered With each chapter being written by research scientists from at least two different institutions it offers multiple professional experiences and perspectives on each subject The book also provides expert analysis and commentary from leading remote sensing and image processing researchers many of whom serve on the editorial boards of prestigious international journals in these fields and are actively involved in international scientific societies Providing the reader with a comprehensive picture of the overall advances and the current cutting edge

developments in the field of mathematical models for remote sensing image analysis this book is ideal as both a reference resource and a textbook for graduate and doctoral students as well as for remote sensing scientists and practitioners
