Snoek,Hung Khoon Tan,Chin Kuan Ho,Benoit Huet,Chong-Wah Ngo,2014-10-20 This book constitutes the refereed proceedings of the 15th Pacific Rim Conference on Multimedia PCM 2014 held in Kuching Malaysia in December 2014 The 35 revised full papers and 6 short papers presented were carefully reviewed and selected from 84 submissions The papers cover a wide range of topics in the area of multimedia content analysis multimedia signal processing and communications and multimedia applications and services They have been organized into topical sections on video coding annotation image and photo applications people image analysis and processing under extra help nearest neighbor neural networks and audio Also included are sections with best papers and posters and demonstrations **Cross-Modal Learning: Adaptivity, Prediction and Interaction** Jianwei Zhang,Stefan Wermter,Fuchun Sun,Changshui Zhang,Andreas K. Engel,Brigitte Röder,Xiaolan Fu,Gui Xue,2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience **Databases Theory and Applications** Junhu Wang,Gao Cong,Jinjun Chen,Jianzhong Qi,2018-05-17 This book constitutes the refereed proceedings of the 29th Australasian Database Conference ADC 2018 held in Gold Coast QLD Australia in May 2018 The 23 full papers plus 6 short papers presented together with 3 demo papers were carefully reviewed and selected from 53 submissions The Australasian Database Conference is an annual international forum for sharing the latest research advancements and novel applications of database systems data driven applications and data analytics between researchers and practitioners from around the globe particularly Australia and New Zealand Information Systems Design and Intelligent Applications Suresh Chandra Satapathy,Jyotsna Kumar Mandal,Siba K.
