Leitch, 2012-03-26 In this timely new 2 volume treatise experts from around the world have banded together to produce a first of its kind synopsis of the exciting and fast moving field of plant evolutionary genomics In Volume I of Plant Genome Diversity an update is provided on what we have learned from plant genome sequencing projects This is followed by more focused chapters on the various genomic residents of plant genomes including transposable elements centromeres small RNAs and the evolutionary dynamics of genes and non coding sequences Attention is drawn to advances in our understanding of plant mitochondrial and plastid genomes as well as the significance of duplication in genic evolution and the non independent evolution among sequences in plant genomes Finally Volume I provides an introduction to the vibrant new frontier of plant epigenomics describing the current state of our knowledge and the evolutionary implications of the epigenomic landscape

Epigenetics in Crop Improvement Luis María Vaschetto, 2024-10-01 Epigenetics encompasses all changes in gene expression that occur without alterations to the DNA sequence These modifications involve DNA methylation histone modifications and ncRNA pathways Plants have evolved remarkable resilience to environmental challenges mediated by epigenetic modifications rather than genetic variation Epigenetic variation provides a means for designing crop varieties with enhanced resilience to abiotic stresses such as drought salinity and extreme temperatures By understanding how epigenetic information systems interact among them and with other canonical genetic pathways we can develop crops better equipped to withstand the challenges of climate change ultimately contributing to global food security

Epigenetics in Crop Improvement Safeguarding Food Security in an Ever Changing Climate is primarily a comprehensive guide that explores the role of epigenetics in plant growth development and adaptation This book also offers a valuable resource for anyone looking to investigate and develop innovative strategies for enhancing crop resilience and productivity in the face of climate change
