This completely new edition of *Terrestrial Vegetation of California* clearly documents the extraordinary complexity and richness of the plant communities and of the state and the forces that shape them. This volume is a storehouse of information of value to anyone concerned with meeting the challenge of understanding managing or conserving these unique plant communities under the growing threats of climate change, biological invasions and development. Harold Mooney, Professor of Environmental Biology, Stanford University. The plants of California are under threat like never before. Traditional pressures of development and invasive species have been joined by a newly recognized threat: human caused climate change. It is essential that we thoroughly understand current plant community dynamics in order to have a hope of conserving them. This book represents an important, well timed advance in knowledge of the vegetation of this diverse state and is an essential resource for professionals, students and the general public alike. Brent Mishler, Director of the University and Jepson Herbaria and Professor of Integrative Biology, University of California, Berkeley.

**Cattle Colonialism** John Ryan Fischer, 2015-08-31. In the nineteenth century the colonial territories of California and Hawai'i underwent important cultural, economic and ecological transformations influenced by an unlikely factor: cows. The creation of native cattle cultures represented by the Indian vaquero and the Hawaiian paniolo demonstrates that California Indians and native Hawaiians adapted in ways that allowed them to harvest the opportunities for wealth that these unfamiliar biological resources presented. But the imposition of new property laws limited these indigenous responses and Pacific cattle frontiers ultimately became the driving force behind Euro American political and commercial domination under which native residents lost land and sovereignty and faced demographic collapse. Environmental historians have too often overlooked California and Hawai'i despite the roles the regions played in the colonial ranching frontiers of the Pacific World. In *Cattle Colonialism* John Ryan Fischer significantly enlarges the scope of the American West by examining the trans Pacific transformations these animals wrought on local landscapes and native economies.
