**5. Scientific Writing - State Test Sample Question (CER)**

Information: Only four planets in our solar system are made of rock, Mercury, Venus, Earth, and Mars. Temperatures on Mercury and Venus are over 800-degrees Fahrenheit, while Mars sits around negative 100-degrees Fahrenheit. Mercury and Mars have no suitable atmosphere to breathe, while Venus holds an atmosphere so thick in carbon dioxide it would kill humans. The other 4 planets, Jupiter, Saturn, Uranus, and Neptune, are made of gas and cannot support land dwelling.

Question: Humans need a habitable planet besides Earth for survival which planet would the most suitable for humans to live in space? Justify your answer. (100-150 words) **OR** Choose answer the question: it is impossible to give information that supports your choice of habitable planet; explain your final conclusion, including why the other planets were not chosen.

- Allow a score to be the most suitable habitable planet for humans if we had to leave Earth.*
- Allow a score of rock like Earth, as we could build. Allow a score, but humans survive in a better temperature on Earth of 50-degrees Fahrenheit. Allow that no atmosphere, but humans can wear oxygen masks to breathe easily.*
- Allow only and Venus are too hot and would kill humans, as we cannot live there for days. The gas planets have no surface as we cannot live there for days. Allow is the only available option for a habitable planet.*
