Nobel, 2020-01-07 Physicochemical and Environmental Plant Physiology Fifth Edition is the updated version of an established and successful text and reference for plant scientists This work represents the seventh book in a 50 year series by Park Nobel beginning in 1970 The original structure and philosophy of the book continue in this new edition providing a genuine synthesis of modern physicochemical and physiological thinking while updating the content Key concepts in plant physiology are developed with the use of chemistry physics and mathematics fundamentals The book contains plant physiology basics while also including many equations and often their derivation to quantify the processes and explain why certain effects and pathways occur helping readers to broaden their knowledge base New topics included in this edition are advances in plant hydraulics other plant water relations and the effects of climate change on plants This series continues to be the gold standard in environmental plant physiology Describes the chemical and the physical principles behind plant physiological processes Provides key equations for each chapter and solutions for the problems on each topic Includes features that enhances the utility of the book for self study such as problems after each chapter and the 45 page section Solution to Problems at the end of the book Includes appendices with conversion factors constants coefficients abbreviations and symbols New to this edition The scientific fields and the nationalities of the more than 115 scientists mentioned in the book

providing a nice personal touch While adding over 100 new or updated references reference of special importance historically are retained showing how science has advanced over the ages The often challenging problems at the end of each chapter provide an important test of the mastery of the topics covered Moreover the solutions to the problems are presented in detail at the end of the book The book can thus be used in courses but also especially useful for students or other persons studying this often difficult material on their own Finally and most important the fifth edition continues the emphasis of a quantitative approach begun fifty years ago by Park Nobel 1970 with the publication of his first book in the series Over the next fifty years from 1970 to 2020 the author has gained considerable experience on how to present quantitative and often abstract material to students This edition is most likely the final version in the series which not only covers some of his unique contributions but also has helped countless students and colleagues appreciate the power and insight gained into biology from calculations

Engineering Mathematics and Computing Park Gyei-Kark,Dipak Kumar Jana,Prabir Panja,Mohd Helmy Abd Wahab,2022-10-03 This book contains select papers presented at the 3rd International Conference on Engineering Mathematics and Computing ICEMC 2020 held at the Haldia Institute of Technology Purba Midnapur West Bengal India from 5 7 February 2020 The book discusses new developments and advances in the areas of neural networks connectionist systems genetic algorithms evolutionary computation artificial intelligence cellular automata self organizing systems soft computing fuzzy systems hybrid intelligent systems etc The book containing 19 chapters is useful to the researchers scholars and practising engineers as well as graduate students of engineering and applied sciences
