**Large-Scale Knowledge Resources. Construction and Application** Takenobu Tokunaga, Antonio Ortega, 2008-02-08  
At the start of the 21st century we are now well on the way towards a knowledge intensive society in which knowledge plays ever more important roles. Thus research interest should inevitably shift from information to knowledge with the problems of building, organizing, maintaining and utilizing knowledge coming central issues in a wide variety of fields. The 21st Century COE program Framework for Systematization and Application of Large scale Knowledge sources COE LKR conducted by the Tokyo Institute of Technology is one of several early attempts worldwide to address these important issues. Inspired by this project LKR2008 aimed at bringing together diverse contributions in cognitive science, computer science, education and linguistics to explore design, construction, extension, maintenance, validation and application of knowledge. Responding to our call for papers, we received 38 submissions from a variety of research areas. Each paper was reviewed by three Program Committee members. Since we were aiming at an interdisciplinary conference covering a wide range of topics concerning large scale knowledge resources LKR, each paper was assigned a reviewer from a topic area outside the main thrust of the paper. This reviewer was asked to assess whether the authors described the motivation and importance of their work in a comprehensible manner even for readers in other research areas. Following a rigorous reviewing process we accepted 14 regular papers and 12 poster papers.

*Human Resources Management in Construction* David Langford, R.F. Fellows, M. R. Hancock, A.W. Gale, 2014-09-25  
Human Resources Management in Construction fills an important gap in current management literature by applying general principles of human resources management specifically to the construction industry. It discusses and explores findings from research to supplement the theoretical and practical procedures used. It explores issues such as the technology used and the pattern of social and political relationships within which people are managed.

**Harvesting and Managing Knowledge in Construction** Yacine Rezgui, John Miles, 2011-02-23  
A successful construction business is a knowledge business. And knowledge must be managed effectively to be used efficiently, especially in a complex project oriented business such as construction where skills acquired and lessons learned on one project need to be applied to the next. A holistic approach to knowledge management KM is taken in this book to incorporate all of the relevant themes tackling technological, socio-cultural and organizational issues with the creation of value as a focus throughout. Information is drawn from a broad range of sources to explain core theories and provide guidance on practical application. Topics covered include changing business relationships in a knowledge economy, knowledge creation processes and theories, data text and knowledge mining techniques, the learning construction organization, future technology for knowledge management. Written by the authors of the first EU funded KM research project in the field of construction, this textbook is uniquely well researched and is the perfect introduction to KM for students across the built environment. It is also a crucial guide to the topic for practitioners.
