

Class 45

SECTION 3:

NOTE: Answer these short-answer questions in the space provided.

1. Illustration for the pressure of a fixed mass of gas with various changes, as are indicated in the following statements:

- (a) Volume: constant; pressure: volume kept constant
- (b) Volume: quadrupled; temperature kept the same
- (c) Volume: tripled; pressure: volume kept the same
- (d) Volume: doubled; temperature: temperature kept the same

2. Two sealed flasks, A and B, contain gas at equal volumes in the same temperature environment. Flask A is inverted as flask B is inverted. Will the pressure in the two flasks remain equal? If not, will it tend to be higher or lower? Will the pressure in B be less or more equal? If all other factors remain constant, flask A will have higher pressure because it is at a higher temperature.

3. Write a short answer for the three that are shown at the end of the space provided.

4. A large tire is inflated to 30 psi at 30°C. Assume that the volume of the tire stays constant. Approximately what is the pressure?

5. If the volume of the air inside a tire is constant, 30°C, by what factor, does the pressure in the tire change if the volume of the tire is doubled? (Assume constant temperature.)

6. Assume the temperature is double if the temperature is doubled. (Assume constant volume.)

7. Assume the pressure is double if the temperature is doubled. (Assume constant volume.)
