Pre Lab Work:

Before beginning this laboratory, answer the following questions on your own piece of paper in your notebook:

- Define the following terms:
 - growth rate – describes how fast a population is increasing or decreasing and is dependent upon the birth rate and death rate
 - birthrate – is the number of infants born in a given year/1000 people in the population
 - death rate – is the number of people who die in a given year/1000 individuals in the population
 - zero population growth – when the population is in equilibrium or the number of births and deaths are equal
 - developed country – countries that highly developed economy and advanced technology
 - developing country – countries that are considered to have low standard of living, and undeveloped industrially
 - demographic transition – refers to the transition from high birth and death rates to low birth and death rates
- What is a population explosion? How quickly is our population growing each year? What about each day?
A population explosion is when a population lacks limited resources so is able to grow out of control. The human population is grows about 80 million a year and 219, 178 each day.
- How is the growth rate of the human population calculated?
 $\text{Growth rate} = \text{birth rate} - \text{death rate}$
- What causes a negative population growth? What causes a positive population growth?
Negative population growth occurs when the birth rate is less than the death rate
Positive population growth occurs when the birth rate exceeds the death rate
- Why do the two graphs appear to have a different shape?
The population growth rate was much slower in the earlier years. The J-curve shows exponential population growth and the graphs are not drawn to the same scale.
- Using a piece of paper, create the following charts:

Country	Birthrate (%)	Death rate (%)	Population Growth 2005	Population Growth 2050	Demographic Transition	Relative Place in Transition	Sketch graph showing Blue & Pink Line
USA	2.06	0.51	0.92	-0.06	1.55	5

responsibilities of sovereign states This book closes the gap between the promises of international environmental agreements and the concept of state sovereignty Maintaining that state sovereignty is not an end in itself but rather a means to protect the autonomy and freedom of citizens the book develops the argument that sovereignty includes fiduciary duties for matters of global concern such as human rights and ecological sustainability Autonomy and freedom of citizens can only prosper if states protect human rights and ecological sustainability both inside and outside national boundaries This is the logic behind global governance And as this book demonstrates at its core stands the ancient idea of trusteeship that is of acting on behalf and to the benefit of those who cannot act for themselves This book s argument that Earth trusteeship and the sovereign state mutually condition each other will appeal to scholars of environmental law international law and environmental science and others with an interest in ecology and global governance From Coal to Biotech Jean-Pierre Jeannet,Hein

Schreuder,2015-04-15 This management book documents the remarkable transformation of DSM first from a coal mining company to a commodity chemicals producer and then in the last two decades to the life sciences materials sciences company it is today with its strong focus on biotechnology The book gives an inside view on the strategic learning cycles that have driven this evolutionary transformation It also discusses the company traits that have contributed to its ability to adapt grow and prosper Renowned business schools such as IMD and Babson have accompanied the second transformation of DSM through their executive education programs The book documents this support and draws lessons for long term collaboration between companies and the business school world **Jacaranda Key Concepts in VCE Economics 1 Units 1 and 2 12e**
