

Introduction

Motion is a movement, which is the change in position of an object. Motion can be described in distance, displacement, speed, velocity, and acceleration. Distance is how far A is from B point. Displacement is the straight-line distance between two points. Speed is described how fast or slow the motion is. Velocity is the speed of something in a given direction. The concept of motion is qualified by two quantity SCALAR and VECTOR. Scalar is always described by its magnitude. For example speed and distance. Vector quantity is described by both the magnitude and direction. For example are displacement, velocity and acceleration.

Material:

Stopwatch, tape measure, paper, pencil

Hypothesis:

As I start walking my speed will be lower, however when I start to run my speed will increase.
