

Alcohol Dependence and Substance Abuse - Essay Sample Essay

Introduction

Alcohol dependence has been a severe problem to most of the people who use alcohol. The alcohol dependence symptoms include yearnings where an individual is obsessed by a strong need and pressure to drink the alcohol, loss of control where the person has no ability to limits drinking at any cost and some physical dependence such as nausea and shakiness when someone stops using alcohol. Dangerous dependence on alcohol may threaten someone's life, and there is a need for the medication and treatment for the situation of alcohol dependence. There are three medications which are known best for treating alcoholism which is approved by food and drug administration.

Antabuse as Drinking Preventive

Antabuse was the first appropriate medicine for treatment of alcohol abuse and its dependency. The medication works by causing a severe adverse response when someone taking the prescriptions drinks alcohol. The person will develop vomiting habit after drinking alcohol. In turn, they will develop a deterrent from drinking alcohol anymore. Sweating, increased thirst, swelling, throbbing headache, blurred vision, and severe vomiting are the first common side effects of Antabuse.

Naltrexone for Alcohol Cravings

Naltrexone is another medication believed in treating the alcohol dependence of an individual. The drug is sold under different branded names such as Depade and Revia. The medicine works by causing blocking of highness in the brain that people experience when they drink alcohol. The drug when mixed with the psychological therapy, the Naltrexone could reduce alcohol desires and relapse rate in alcoholics (Volpicelli, 1992). Most main side effects associated with Naltrexone are anxiety and nervousness, abdominal pain, insomnia, nausea, and vomiting.

Campral for Discomfort

Campral (acamprosate) is the new medication accepted for the treatment of alcohol dependence in U.S. Medicine works by reducing the physical agony and the emotional discomposure an individual develops when they quit drinking. The Campral also works by restoring the balance of natural chemicals in the brain. Campral should be used as part of a complete cure program with both counseling and psychological support. The main side effects associated with Campral is diarrhea, nausea, vomiting and stomach pain.

Other Abused Drug Substance

Cigarettes and Tobacco products are the most abused drugs by most of the people. Tobacco contains a chemical known as Nicotine that gives an individual a rush of pleasure and energy (Stedman, 1968). This effect wears off fast in the body. Thus the person yearns for more and therefore causing

Zucker,Sandra A.

Brown,2019-08-01 Adolescent substance abuse is the nation's 1 public health problem. It originates out of a developmental era where experimentation with the world is increasingly taking place and where major changes in physical self and social relationships are taking place. These changes cannot be understood by any one discipline nor can they be described by focusing only on the behavioral and social problems of this age period, the characteristics of normal development or the pharmacology and addictive potential of specific drugs. They require knowledge of the brain's systems of reward and control, genetics, psychopharmacology, personality, child development, psychopathology, family dynamics, peer group relationships, culture, social policy, and more. Drawing on the expertise of the leading researchers in this field, this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse. The Handbook is organized into eight sections covering the literature on the developmental context of this life period, the epidemiology of adolescent use and abuse, similarities and differences in use, addictive potential and consequences of use for different drugs, etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social. Two sections cover the clinical ramifications of abuse and prevention and intervention strategies to most effectively deal with these problems. The Handbook's last section addresses the role of social policy in framing the problem in addressing it and explores its potential role in alleviating it. **Essentials of Maternity, Newborn, and Women's Health** Susan Ricci,2020-08-20

Give students the confidence and competence to meet the challenges of today's maternity, newborn, and women's health nursing practice. Focusing on the reproductive issues of women throughout the lifespan, *Essentials of Maternity, Newborn, and Women's Health Nursing, Fifth Edition* builds the knowledge and clinical capabilities students need to excel on the NCLEX and confidently care for women and their families. Updated with the latest practices, interventions, and cultural considerations, this practical text immerses students in realistic nursing case studies, delivering step-by-step guidance and real-world clinical practice to prepare students for success throughout their nursing careers. *Clinical Interviews for Children and Adolescents, Second Edition* Stephanie H. McConaughy,2013-02-25 This authoritative work offers guidelines for interviewing children of different ages as well as their parents and teachers and for weaving the resulting data into multimethod assessment and intervention planning.
