Mazid, 2014-11-24 CDA and PDA Made Simple cuts many long stories short and encapsulates a long standing tradition in modern and contemporary linguistics The theoretical scope of the book encompasses a lengthy review of relevant studies in the area of critical discourse analysis CDA and more broadly in the areas of power control ideology and politics as realized and enacted in discourse The book also brings together a detailed theoretical background on the main tenets and assumptions tools and recipes trends and extensions and critiques and applications of critical and political discourse analysis PDA Its analytical focus is predominantly on how ideology and power are linguistically and meta linguistically realized specifically through transitivity modality metadiscourse and presupposition in some discourse genres in English **Federal Energy Regulatory Commission Reports** United States. Federal Energy Regulatory Commission, 1993-07 *Pitch Determination of Speech Signals* W. Hess, 2012-12-06 Pitch i e fundamental frequency FO and fundamental period TO occupies a key position in the acoustic speech signal The prosodic information of an utterance is predominantly determined by this parameter The ear is more sensitive to changes of fundamental frequency than to changes of other speech signal parameters by an order of magnitude The quality of vocoded speech is essentially influenced by the quality and faultlessness of the pitch measure ment Hence the

importance of this parameter necessitates using good and reliable measurement methods At first glance the task looks simple one just has to detect the fundamental frequency or period of a quasi periodic signal For a number of reasons however the task of pitch determination has to be counted among the most difficult problems in speech analysis 1 In principle speech is a nonstationary process the momentary position of the vocal tract may change abruptly at any time This leads to drastic variations in the temporal structure of the signal even between subsequent pitch periods and assuming a quasi periodic signal is often far from realistic 2 Due to the flexibility of the human vocal tract and the wide variety of voices there exist a multitude of possible temporal structures Narrow band formants at low harmonics especially at the second or third harmonic are an additional source of difficulty 3 For an arbitrary speech signal uttered by an unknown speaker the fundamental frequency can vary over a range of almost four octaves 50 to 800 Hz
