[The Internet Challenge: Technology and Applications](#) Günter Hommel,Sheng Huanye,2012-12-06 The International Workshop on The Internet Challenge Technology and Applications is the fifth in a successful series of

workshops that were established by Shanghai Jiao Tong University and Technische Universität Berlin. The goal of those workshops is to bring together researchers from both universities in order to exchange research results achieved in common projects of the two partner universities or to present interesting new work that might lead to new cooperation. The series of workshops started in 1990 with the International Workshop on Artificial Intelligence and was continued with the International Workshop on Advanced Software Technology in 1994. Both workshops have been hosted by Shanghai Jiao Tong University. In 1998 the third workshop took place in Berlin. This International Workshop on Communication Based Systems was essentially based on results from the Graduiertenkolleg on Communication Based systems that was funded by the German Research Society DFG from 1991 to 2000. The fourth International Workshop on Robotics and its Applications was held in Shanghai in 2000 supported by VDI/VDE GMA and GI.

Modernizing Applications with IBM CICS Russell Bonner, Sophie Green, Ezriel Gross, Jim Harrison, Debra Scharfstein, Will Yates, IBM Redbooks, 2020-12-30. IBM CICS is a mixed language application server that runs on IBM Z. Over the 50 years since CICS was introduced in 1969 enterprises have used the qualities of service QoSs that CICS provides to allow them to create high throughput and secure transactional applications that have powered their business. As the IT landscape has evolved so has CICS to allow these applications to integrate with new platforms and still provide value to the rest of the business. Because of this capability many businesses still rely on CICS to power their core applications. This IBM Redpaper publication focuses on modernizing these CICS applications allowing them to integrate with cloud native applications. This modernization can be achieved either by constructing application programming interfaces APIs that allow new cloud native applications to connect to your existing assets, rewriting parts of your application in newer languages and hosting them back on CICS, or by using CICS capabilities to extend your applications to provide new capabilities and functions. The paper takes a traditional example application and shows you how it works. Then the paper extends the example, rewrites portions of its functions, and enables its APIs. It also explains how CICS applications can use continuous integration CI and continuous delivery CD to deliver test and deploy code into CICS easily and with quality.
