- Traversing a “triangle” in our circle model means taking two steps forward around the circle and one step back.

- $C(c/2, 2)$  total # of possibilities for two steps
- # ways of observing the target  $c/2$  steps
- forward =  $(1/2)(c/2)(c/2-1) = (1/4)c(c/2-1)$

**The Secrets of Triangles** Alfred S. Posamentier, Ingmar Lehmann, 2012-08-28 Requiring no more than a knowledge of high school mathematics and written in clear and accessible language this book will give all readers a new insight into some of the most enjoyable and fascinating aspects of geometry Everyone knows what a triangle is yet very few people appreciate that the common three sided figure holds many intriguing secrets For example if a circle is inscribed in any random triangle and then three lines are drawn from the three points of tangency to the opposite vertices of the triangle these lines will always meet at a common point no matter what the shape of the triangle This and many more interesting geometrical properties are revealed in this entertaining and illuminating book about geometry Flying in the face of the common impression that mathematics is usually dry and intimidating this book proves that this sometimes daunting abstract discipline can be both fun and intellectually stimulating The authors two veteran math educators explore the multitude of surprising relationships connected with triangles and show some clever approaches to constructing triangles using a straightedge and a compass Readers will learn how they can improve their problem solving skills by performing these triangle constructions The lines points and circles related to triangles harbor countless surprising relationships that are presented here in a very engaging fashion

**Solution of Triangles** Erik Oberg, 2017-10-21 Excerpt from *Solution of Triangles A Treatise on the Use of Formulas and the Practical Application of Trigonometry and Logarithms in the Solution of Shop Problems Involving Right Angled and Oblique Angled Triangles* In mathematical and mechanical books and treatises as well as in articles containing calculations published in the engineering journals formulas are used to a great extent instead of rules In these formulas signs and symbols are used in order to Condense into a small space the essentials of what would otherwise be long and cumbersome rules The symbols used are generally the letters in the alphabet and the signs are simply the ordinary signs for arithmetical calculations with some additional ones necessary for special purposes Letters from the Greek alphabet are commonly used to designate angles and the Greek letter  $\pi$  is always used to indicate the proportion of the circumference of a circle to its diameter  $1r$  therefore is always in formulas equal to The most commonly used Greek letters be sides 1 are  $\alpha$  3  $\beta$  and 1  $\gamma$  Knowledge of algebra is not necessary in order to make possible the successful use of formulas for the solving of problems such as occur in the solution of triangles but a thorough understanding of the rules and processes of arithmetic is very essential The symbols or letters used in the formulas simply stand in place of the actual figures or numerical values which are inserted in the

formula in each specific case according to the requirements of the problem to be solved When these values are inserted the result required may be obtained by simple arithmetical processes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Pythagorean triangles
