Scientific and Technical Aerospace Reports ,1984 **The Compressive Behavior of Glass Fiber Reinforced Composites Subjected to Local Thermal Loading** Catherine Meaghan Westover,2000 An experimental study has been conducted to determine the effects of local thermal loading on the compressive behavior of glass fiber composites The primary factors considered were the intensity of thermal loading and the applied compressive load The material specimens tested were laminate plates composed of Micarta 010 FR4 a fire retardant glass epoxy laminate Two types of testing were conducted for heat fluxes of 85 kW m² 140 kW m² and 195 kW m² The first type involved the unloaded radiant thermal testing of the material and provided a baseline from which the effects of thermal loading on the physical properties of the composite specimen were determined The second type was a combined loading test which involved loading specimens in compression to a constant applied load and subjecting them to a local thermal load

CAD Data Transfer for Solid Models E.G. Schlechtendahl, 2013-11-11 Principal authors U Kroszynski B Palstr9Sm 1 1

The evolution of concepts and specifications for CAD data exchange The CAD CAM community has witnessed during the last decade the appearance of several specifications as well as proposals for standards which either attempt to cover wider areas or to be more reliable and stable than the others With the rapid evolution of both hardware and software the capabilities offered by CAD systems and CAD based application systems are far more advanced than they were only ten years ago even when they are now based on micro computers or personal computers The situation with standards however is not and cannot be so In order to be reliable and accepted by a wide community of both vendors and users a standard has to be stable This implies a life span of at least a decade This also implies that the standard has to be general and flexible enough to accommodate present as well as expected future developments 1 1 1 IGES The initial development of concepts for CAD data exchange is strongly influenced by the US Integrated Computer Aided Manufacturing ICAM programme that dealt with the development of methods for data exchange In September 1979 a subgroup was established with participation of the National Bureau of Standards the General Electric Company and the Boeing Company The result of this effort was the Initial Graphics Exchange Specification IGES that was published as a NBS report 61 in 1980
