The symposium was preceded by a series of four workshops on polarized electron sources and electron spin polarimeters

countries among them many young physicists came together and discussed mainly technological spin problems The high level

of participation indicates that workshops combined with the symposium are attractive not only for people who plan and prepare polarized beams and targets but also for experimentalists and theorists dealing with high energy spin physics At these workshops many very interesting and important recent results were presented and reviewed Thus we hope these proceedings will be valuable to many researchers in these fields The Organizing Committee would like to thank all participants in particular the speakers and the session chairmen for their contributions to the workshops and for helping to create a lively and stimulating atmosphere Special thanks go to the organizers W Haeberli S Mango E Reichert E Steffens W Thiel U Wienands for their cooperation in preparing and running these workshops We gratefully acknowledge the enthusiastic help of the members of our institute in preparing and running the conference and the workshops especially Mrs D FaSbender Mrs E Wendorf Mrs J Wetzels and Dr U Idschock

An Assessment of U.S.-Based Electron-Ion Collider Science National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Physics and Astronomy,Committee on U.S.-Based Electron-Ion Collider Science Assessment,2018-10-13 Understanding of protons and neutrons or nucleons the building blocks of atomic nuclei has advanced dramatically both theoretically and experimentally in the past half century A central goal of modern nuclear physics is to understand the structure of the proton and neutron directly from the dynamics of their quarks and gluons governed by the theory of their interactions quantum chromodynamics QCD and how nuclear interactions between protons and neutrons emerge from these dynamics With deeper

understanding of the quark gluon structure of matter scientists are poised to reach a deeper picture of these building blocks and atomic nuclei themselves as collective many body systems with new emergent behavior The development of a U S domestic electron ion collider EIC facility has the potential to answer questions that are central to completing an understanding of atoms and integral to the agenda of nuclear physics today This study assesses the merits and significance of the science that could be addressed by an EIC and its importance to nuclear physics in particular and to the physical sciences in general It evaluates the significance of the science that would be enabled by the construction of an EIC its benefits to U S leadership in nuclear physics and the benefits to other fields of science of a U S based EIC *Ice-minus* United States.
