1. The nurse is teaching the daughter of a client who has middle-stage Alzheimer disease. The daughter asks, "Will the sertraline my mother is taking improve her dementia?" How would the nurse respond about the purpose of the drug?
 - a. "It will allow your mother to live independently for several more years."
 - b. "It is used to halt the advancement of Alzheimer disease but will not cure it."
 - c. "It will not improve her dementia but can help control emotional responses."
 - d. "It is used to improve short-term memory but will not improve problem solving."

 - d. Use validation therapy when communicating with the client.

ANS: B

The client who has early Alzheimer disease (AD) does not require assistance with ADLs or validation therapy.
