reforms led to coups d'état and presidential assassinations. A conundrum arises in terms of what transpires next. In Rwanda, total genocide was perpetrated by extremist Hutu actors including government officials upon the country's Tutsi and politically moderate Hutu populations. In Burundi, the coup d'état failed and instead ushered in a lengthy period of civil war. This divergence in outcome is puzzling given the similarity of these two countries and it is not adequately explained by studies that address collective violence in each. This book utilizes an integrative approach that facilitates the formation of an explanation that more fully accounts for variation in the type of collective violence that occurred in Rwanda and Burundi. Showing that political actors during periods of major institutional change do not all respond to or perceive reform in the exact same manner or in a necessarily rational manner, this book makes an important contribution to the literature on ethnic conflict, collective violence, and democratization in Africa.

Safeguards Systems Analysis R. Avenhaus, 2013-06-29

Adequate verification is the key issue not only in today's arms control, arms limitation, and disarmament regimes but also in less spectacular areas like auditing in economics or control of environmental pollution. Statistical methodologies and system analytical approaches are the tools developed over the past decades for quantifying those components of adequate verification which are quantifiable, i.e. numbers, inventories, mass transfers, etc. together with their uncertainties. In his book Safeguards Systems Analysis, Professor Rudolf Avenhaus condenses the experience and expertise he has gained over the past 20 years when his work was mainly related to the development of the IAEA's system for safeguarding nuclear materials to system analytical studies at IIASA in the field of future energy requirements and their risks and to the application of statistical techniques to arms control. The result is a unified and up-to-date presentation and analysis of the quantitative aspects of safeguards systems and the application of the more important findings to practical problems. International Nuclear Material Safeguards by far the most advanced verification system in the field of arms limitation is used as the main field of application for the game-theoretical analysis, material accountancy theory, and the theory on verification of material accounting data developed in the first four chapters.
