Arithmetic Counts! Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

Segregation by Experience Jennifer Keys Adair,Kiyomi Sánchez-Suzuki Colegrove,2021-05-03 Early childhood can be a time of rich discovery a period when educators have an opportunity to harness their students fascination to create unique learning opportunities Some teachers engage with their students ideas in ways that make learning collaborative but not all students have access to these kinds of learning environments In Segregation by Experience the authors filmed and studied a a first grade classroom led by a Black immigrant teacher who encouraged her diverse group of students to exercise their agency When the researchers showed the film to other schools everyone struggled Educators admired the teacher but didn t think her practices would work with their own Black and brown students Parents of color many of them immigrants liked many of the practices but worried that they would compromise their children And the young children who viewed the film thought that the kids in the film were terrible loud and badly behaved they told the authors that learning was supposed to be quiet still and obedient In Segregation by Experience Jennifer Keys Adair and Kiyomi S nchez Suzuki Colegrove show us just how much our expectations of children of color affect what and how they learn at school and they ask us to consider which children get to have sophisticated dynamic learning experiences at school and which children are denied such experiences because of our continued racist assumptions about them
