Have students read the opening paragraph and look at the photo. Ask, What made Fleming different from other scientists who had seen this mold? (Fleming recognized the importance of this discovery. He assumed that the mold had released a chemical that prevented the growth of bacteria.)

Alchemy Relate

Students who have read the Harry Potter books will be familiar with the name of one alchemist, Nicolas Flamel (1330-1414), who wrote a book about the philosopher's stone. Alchemists believed that the philosopher's stone could change base metals into gold.

Connecting to Your World

In 1928, Alexander Fleening, a Scottish scientist, noticed that a bacteria he was studying did not grow

same observation, but Fleming was the first to recognize its importance. He assumed that the mold had released a chemical that prevented the growth of the bacteria. That chemical was penicitin, which can kill a wide range of harmful bacteria. In 1945. Fleming shared a Nobel Prize for Medicine with Howard Florey and Ernst Chain, who led the team that isolated penicillin in this section you will study the methods scientists.

Alchemy

The word observing comes from alchemy. Long before these were chemists, alchemists were studying matter. Alchemy arose independently in many regions of the world. It was practiced in China and India as early as 400 R.C. In the eighth century, Arabs brought alchemy to Spain, from where it spread quickly to other parts of Europe.

Alchemy had a practical side and a mystical side. Practical alchemy focused on developing techniques for working with metals, glass, and dves-Mystical alchemy focused on concepts like perfection. Because gold was were as the perfect metal, alchemists were searching for a way to change other metals, such as lead, into rold. Although alchemists did not succeed in this quest, the work they did spurred the development of chemistry.

C Alchemists developed the tools and techniques for working with chemicals. Aichemists developed processes for separating mixtures and purifying chemicals. They designed equipment that is still used today. including beakers, flasks, tongs, funnels, and the mortar and peetle in Figure 1.15. What they did not do was provide a logical set of explanations for the changes in matter that they observed. That task was left for chemists no accommodish.

Figure 1.15. A bowl-shaped mortar and a club-shaped pestile are used to grind or crush materials such as herbs, spices, and point pigments. The mortar and pestile in the photograph is made of porcelain. which is a hard motertal.

Lewars, 2010-11-10 This corrected second edition contains new material which includes solvent effects the treatment of singlet diradicals and the fundamentals of computational chemistry Computational Chemistry Introduction to the Theory and Applications of Molecular and Quantum Mechanics is an invaluable tool for teaching and researchers alike The book provides an overview of the field explains the basic underlying theory at a meaningful level that is not beyond beginners and it gives numerous comparisons of different methods with one another and with experiment The following concepts are illustrated and their possibilities and limitations are given potential energy surfaces simple and extended Hueckel methods ab initio AM1 and related semiempirical methods density functional theory DFT Topics are placed in a historical context adding interest to them and removing much of their apparently arbitrary aspect The large number of references to all significant topics mentioned should make this book useful not only to undergraduates but also to graduate students and academic and industrial researchers Biophysical Chemistry Charles R. Cantor, Paul Reinhard Schimmel.1980 Biochemistry Donald Voet, Judith G. Voet, 2010-11-16 The Gold Standard in Biochemistry text books Biochemistry 4e is a modern classic that has been thoroughly revised Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution Incorporates both classical and current

research to illustrate the historical source of much of our biochemical knowledge Prentice Hall Physical Science Concepts in Action Program Planner National Chemistry Physics Earth Science, 2003-11 Prentice Hall Physical Science Concepts in Action helps students make the important connection between the science they read and what they experience every day Relevant content lively explorations and a wealth of hands on activities take students understanding of science beyond the page and into the world around them Now includes even more technology tools and activities to support differentiated instruction Aromatic Chemistry John D. Hepworth, David R. Waring, Michael J. Waring, 2002 This book provides an up to date and comprehensive account of aromatic chemistry A series of chapters describes the synthesis and reactions of the major functional derivatives of benzene and the more common polycyclic systems. The concept of aromaticity and the mechanism of aromatic substitution are discussed as is the use of metals in the synthesis of aromatic compounds Throughout emphasis is placed on mechanisms Worked problems and questions are provided to aid understanding In addition to providing material required by an undergraduate studying chemistry Aromatic Chemistry is also ideal for industrial chemists seeking to update their knowledge of this important aspect of chemistry Ideal for the needs of undergraduate chemistry students Tutorial Chemistry Texts is a major new series consisting of short single topic or modular texts concentrating on the fundamental areas of chemistry taught in undergraduate science courses Each book provides a concise account of the basic principles underlying a given subject embodying an independent learning philosophy and including worked examples **Prentice Hall Science Explorer** Michael J. Padilla,2002 Between Technology and Science Martin Meyer, 2005-02 This dissertation addresses emerging developer communities in a new field of science and technology as well as methods to capture exchange processes between them It contributes to the discussion about a new mode of knowledge production and a changing division of labour between public research industry and government by investigating nanotechnology an emerging area between science and technology To explore exchange processes in this field the study applies various methods In particular it uses patent citation analysis The methodological contribution is a new interpretation of this indicator which sees patent citations as information flows that point to reciprocal exchange processes and potential overlaps between science and technology This is in contrast to the received interpretation which suffers from the application of a framework that was developed in the context of scholarly citation and does not fully appreciate that a patent citation is established by the patent examiner a party external to the inventive process Various formats of patent citation analysis describe nanotechnology as a set of instrument driven scientific fields on their way towards science related technologies Even though nanotechnology patents contain more patent citations to the scientific literature than other technical fields the science and technology systems are relatively autonomous What links them in the case of nano science and technology is a common interest in improving techniques of nano scale measurement and manipulation Another finding is that both countries and firms exhibit relatively strong path dependencies While nanotechnology comprises a key set of

technological areas instrumentation electronics and pharmaceuticals chemicals nano scale activities vary considerably from country to country Also knowledge building activities of firms follow a strong technological path dependency As a result social capital seems to be confined to chiefly technological or scientific trajectories. Hence social capital appears not to be very useful in explaining how knowledge is accumulated and integrated at the nano scale Given the central role of instrumentation and the mediated nature of exchange between science and technology at the nano scale public policies should be directed towards supporting education and infrastructure in the area rather than more direct transfer mechanisms
