**Earth** Frank H. T. Rhodes, 2012-06-15 It's impossible to grasp the whole planet or integrate all the descriptions of it. But because we live here we have to try. This is not just an artistic compulsion or an existential yearning, still less an academic exercise. It's a survival issue. This is the only planet we have. We're stuck here and we don't own the place; it would be the height of arrogance to assume that we do. We're tenants here, not owners, but we're tenants with hope for a long-term tenancy. We want to extend our lease just as far as we can from Earth. A Tenant's Manual. In *Earth: A Tenant's Manual*, the distinguished geologist Frank H. T. Rhodes, President Emeritus of Cornell University, provides a sweeping, accessible and deeply informed guide to the home we all share, showing us how we might best preserve the Earth's livability for ourselves and future generations. Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life. He emphasizes the changes that are of concern to us today, from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population. He concludes with an extended exploration of humanity's prospects on a complex, protean and ultimately finite world. It is not a question of whether the planet is sustainable; the challenge facing life on Earth and the life of the Earth is whether an expanding and high-consumption species like ours is sustainable. Only new resources, new priorities, new policies, and most of all, new knowledge can reverse the damage that humanity is doing to our home and ourselves. A sustainable human future, Rhodes concludes in this eloquent, sobering but ultimately optimistic book, will require a sense of responsible stewardship for we are not owners of this planet; we are tenants. Surveying the systems, large and small, that govern Earth's processes and influence its changes, Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home.
