MULTIPLE CHOICE

1. The nurse completes an admission database and explains that the plan of care and discharge goals will be developed with the patient's input. The patient asks, "How is this different from what the doctor does?" Which response would be **most** appropriate for the nurse to make?
 - a. "The role of the nurse is to administer medications and other treatments prescribed by your doctor."
 - b. "In addition to caring for you while you are sick, the nurses will help you plan to maintain your health."
 - c. "The nurse's job is to help the doctor by collecting information and communicating any problems that occur."
 - d. "Nurses perform many of the same procedures as the doctor, but nurses are with the patients for a longer time than the doctor."

ANS: B

The American Nurses Association (ANA) definition of nursing describes the role of nurses in promoting health. The other responses describe dependent and collaborative functions of the nursing role but do not accurately describe the nurse's unique role in the health care system.

DIF: Cognitive Level: Analyze (analysis)

TOP: Nursing Process: Implementation MSC: NCLEX: Safe and Effective Care Environment

2. The nurse describes to a student nurse how to use evidence-based practice (EBP) when caring for patients. Which statement by the nurse accurately describes the use of EBP?
 - a. "Inferences from all published articles are used as a guide."
 - b. "Patient care is based on clinical judgment, experience, and traditions."
 - c. "Data are analyzed later to show that the patient outcomes are consistently met."
 - d. "Recommendations are based on research, clinical expertise, and patient preferences."

ANS: D

Evidence-based practice (EBP) is the use of the best research-based evidence combined with clinician expertise and consideration of patient preferences. Clinical judgment based on the nurse's clinical experience is part of EBP, but clinical decision making should also incorporate current research and research-based guidelines. Evaluation of patient outcomes is important, but data analysis is not required to use EBP. All published articles do not provide research evidence; interventions should be based on credible research, preferably randomized controlled studies with a large number of subjects.

DIF: Cognitive Level: Remember (knowledge)

TOP: Nursing Process: Planning

MSC: NCLEX: Safe and Effective Care Environment

3. The nurse teaches a student nurse about how to apply the nursing process when providing patient care. Which statement by the student nurse indicates that teaching was successful?
 - a. "The nursing process is a research method of diagnosing the patient's health care problems."
 - b. "The nursing process is used primarily to explain nursing interventions to other

Analysis of Hospital Costs Donald S. Shepard, Dominic Hodgkin, Yvonne E.

Anthony, 2000 A practical guide to the principles and methods of cost analysis as a managerial tool for improving the efficiency of hospitals Addressed to managers and administrators the manual aims to equip its readers with the knowledge and skills needed to calculate the costs of different activities or departments analyse their significance and use this information to manage resources wisely Throughout recommendations and advice are specific to the different purposes of cost analysis and the different types of decisions commonly facing managers The manual which is intended for use as a training tool was finalized following extensive field testing in workshops in Bangladesh Egypt and Zimbabwe Methods of cost finding and cost analysis are thoroughly explained and illustrated with practical examples and model step by step procedures for performing calculations Since hospital accounting systems in developing countries may have gaps or inaccuracies the manual gives particular attention to reliable methods for estimating costs when existing data are problematic The manual opens with an explanation of the many advantages of using cost finding and cost analysis as managerial tools These include the provision of data needed for informed decisions on operations and infrastructure investment the planning of future

budgets the establishment of charges for patient services and the development of mechanisms for ensuring that costs do not exceed available revenues and subsidies Against this background the core of the manual is presented in three chapters The first and most extensive chapter explains how to allocate costs to cost centres and how to compute unit costs Information and examples are presented according to seven steps Each is discussed in terms of the types of data needed how component cost items should be treated and how costs can be computed in particular situations or cases Practical examples are used to illustrate the types of questions addressed in cost analysis and the value of this information in guiding decisions Chapter two explains how cost data can be used to improve the management of an individual hospital Information is intended to guide decisions at both the cost centre or department level and the hospital level Managerial tasks covered include budgeting profitability efficiency improvements contracting outside services or producing in house and assessing fiscal solvency Chapter three considers the use of cost data in managing national and regional hospital systems Specific applications include improvements in the referral system the appropriate use of different providers of services and the comparison of similar hospitals to identify inefficiencies or sources of waste The manual concludes with a series of practical exercises followed by explanations of their answers
