

## Post supports

Cut the post support blanks from 5/4 stock, then lay out and cut the curved outlines using a sabre saw (Photo 8). Smooth the curved edges with a spokeshave (Photo 9), using the curved-base type to work the concave portions and the flat-base type for the convex sections. Finish up the supports by rounding over the edges with a router (Photo 10).

Because the supports are attached to the post with dowel pins, a doweling jig is essential for achieving perfectly aligned perpendicular holes. Draw matching centerlines on the post and supports, then bore 5/16-in.-

dia. holes to a depth of 1 1/16 in. for each member (Photo 11).

Next, bore the holes for the lag-screw that joins the post to the assembled base using a drill guide to keep the holes square. Then, bore the lag-screw pilot hole in the end of the post (Photo 12). A drill guide is indispensable in making this hole.

Final assembly is accomplished in two stages. First, join the supports to the post with glue, dowels and clamps (Photo 13). Then, once this glue has cured, dry assemble the base and post and bore the pilot holes for the screws that join the two. Remove the base from the post, then bore and counter-

**4** Dry assemble base components with masking tape and bore pilot holes for alignment nails that hold pieces square.

**7** Use a crosscut saw to cut inclines on the top surface of the base members. Remove any cut marks by hand planing.

**10** Ease sharp edges using router with rounding-over bit. Hold small pieces to a clamped scrap piece with masking tape.

**5** Use a sharp rip saw—or band saw—to resaw stock to a 1/4-in. thickness. Make the cut on the waste side of the line.

**8** Carefully lay out the profile of the post supports, and then make the curved cuts with a sabre saw and sharp blade.

**11** Bore dowel holes in post and post supports using a doweling jig. Attach tape to drill bit to act as depth gauge.
