Levine, 2018-10-26 This textbook provides a general introduction to the field of neural networks Thoroughly revised and updated from the previous editions of 1991 and 2000 the current edition concentrates on networks for modeling brain processes involved in cognitive and

behavioral functions Part one explores the philosophy of modeling and the field's history starting from the mid 1940s and then discusses past models of associative learning and of short term memory that provide building blocks for more complex recent models Part two of the book reviews recent experimental findings in cognitive neuroscience and discusses models of conditioning categorization category learning vision visual attention sequence learning behavioral control decision making reasoning and creativity The book presents these models both as abstract ideas and through examples and concrete data for specific brain regions The book includes two appendices to help ground the reader one reviewing the mathematics used in network modeling and a second reviewing basic neuroscience at both the neuron and brain region level The book also includes equations practice exercises and thought experiments
