Simon's**

Heritage Edgardo Bucciarelli, Shu-Heng Chen, Juan M. Corchado, 2017-06-13 The special session on Decision Economics DECON is a scientific forum held annually and intended to share ideas projects research results models and experiences associated with the complexity of behavioural decision processes and socio economic phenomena DECON 2017 was held at the Polytechnic of Porto ISEP Portugal as part of the 14th International Conference on Distributed Computing and Artificial Intelligence For the second consecutive year the Editors of this book have drawn inspiration from Herbert A Simon's immense body of work and argue that Simon precipitated something akin to a revolution in microeconomics focused on the concept of decision making Further it is worth noting that the recognition of relevant decision making takes place in a range of critical subject areas and research fields including economics finance information systems small and international business management operations and production Therefore decision making issues are of fundamental importance in all branches of economics addressed both deductively and inductively Not surprisingly the study of decision making has seen growing

empirical research efforts in the economic literature over the last sixty years and more recently a variety of insightful cutting edge experimental behavioural and computational approaches. Additionally the awareness regarding generalizations and reductions to express economic concepts has led on the one hand to an increasing risk of spreading the language of mathematics as a rhetorical tool and on the other hand to an oversimplification and overlooking of some crucial details especially when it comes to human decisions and hence economic behaviour. That awareness however has helped to produce an extraordinary volume of empirical research aimed at discovering how economic agents cope with complex decisions. In this sense the international scientific community acknowledges Herbert A. Simon's research endeavours to understand the processes involved in economic decision making and their implications for the advancement of economic professions. Within the field of decision making indeed Simon's rejection of the standard decision making models used in neoclassical economics inspired social scientists worldwide to develop research programmes in order to study decision making empirically. The main achievements concern decision making for individuals, firms, markets, governments, institutions and last but not least science and research.

Growth Mechanisms and Sustainability Jun Ma, Masashi Yamamoto, 2021-07-16. This book provides a broad investigation of various issues in East Asia's steel industry since the 1980s including international specialization and trade relations, the sustainable use of resources, technological innovations and environmental mitigation alongside a consideration of the rapid growth in Chinese steel industry. Using macro and firm level data and case studies based on field research to discuss issues concerning the steel industry in East Asia. In search of an easy understanding we try to simplify complicated economic models and statistical analyses and concentrate on policy implications based as much as possible on the results of empirical analyses. We believe that this book will be of interest to policymakers, economists, practitioners and advocates of sustainability.

An Introduction to Quantitative Research Methods for Marketing Ahmad Daryanto, 2025-06-03. This introductory text covers the foundational concepts and statistical applications of quantitative research techniques using SPSS and R. Using step by step examples throughout the book is broken down into six core sections. Part 1 covers an introduction to quantitative research methods and how to get started with SPSS and R. Part 2 covers basic concepts in measurement, data descriptions and distributions. Part 3 discusses hypothesis testing and basic statistical tests. Part 4 covers regression analysis.
