Introduction to Modern Time Series Analysis Gebhard Kirchgässner, Jürgen Wolters, Uwe Hassler, 2012-10-09 This book presents modern developments in time series econometrics that are applied to macroeconomic and financial time series, bridging the gap between methods and realistic applications. It presents the most important approaches to the analysis of time series which may be stationary or nonstationary. Modelling and forecasting univariate time series is the starting point. For multiple stationary time series, Granger causality tests and vector autoregressive models are presented. As the modelling of nonstationary univariate or multivariate time series is most important for real applied work, unit root and cointegration analysis as well as vector error correction models are a central topic. Tools for analysing nonstationary data are then transferred to the panel framework. Modelling the multivariate volatility of financial time series with autoregressive conditional heteroskedastic models is also treated.

Audit Studies: Behind the Scenes with Theory, Method, and Nuance S. Michael Gaddis, 2018-02-20 This book offers practical instruction on the use of audit studies in the social sciences. It features essays from sociologists, economists and other experts who have employed this powerful and flexible tool. Readers will learn how to implement an audit study to examine a variety of questions in their own research. The essays first discuss situations where audit studies are the most effective. These tools allow researchers to make strong causal claims and explore questions that are often difficult to answer with observational data. Audit studies also stand as the single best way to conduct research on discrimination. The authors highlight what these

studies have uncovered about labor market processes in the past decade The next section gives some guidance on how to design an audit study The essays cover the difficult task of getting a study through an institutional review board the technical setup of matching procedures and statistical power and analysis techniques The last part focuses on more advanced aspects Coverage includes understanding context what variables may signal and the use of technology The book concludes with a discussion of challenges and limitations with an eye towards the future of audit studies Field experiments studying and testing for housing and labor market discrimination have rightly become the dominant mode of discrimination related research in economics and sociology This book brings together a number of interesting and useful perspectives on these field experiments Many different kinds of readers will find it valuable ranging from those interested in getting an overview of the evidence to researchers looking for guidance on the nuts and bolts of conducting these complex experiments David Neumark Chancellor s Professor of Economics at the University of California Irvine For decades researchers have used experimental audit studies to uncover discrimination in a variety of markets Although this approach has become more popular in recent years few publications provide detailed information on the design and implementation of the method This volume provides the first deep examination of the audit method with details on the practical political analytical and theoretical considerations of this research Social scientists interested in consuming or contributing to this literature will find this volume immensely useful Devah Pager Professor of Sociology and Public Policy at Harvard University
