Using Analogies in Middle and Secondary Science Classrooms Allan G. Harrison, Richard K. Coll, 2008 Makes a distinct contribution to science instruction Many teachers attempt to use analogies and metaphors to introduce abstract concepts however little is available on how to do this with specific examples The authors definitely address a need Douglas Llewellyn Professor of Science Education St John Fisher College Helps preservice and novice teachers use analogies and allows teachers to bridge the gap that sometimes occurs when students are learning abstract concepts The examples cover a wide variety of subjects and are written in a concise easy to understand voice John D Ophus Assistant Professor of Science Education University of Northern Iowa Use the power of analogies to enliven your science classroom and meet national standards When analogies are effective they readily engage students interest and clarify difficult and abstract ideas But not all analogies are created equal and developing them is not always intuitive Drawing from an extensive research base on the use of analogies in the classroom Allan Harrison Richard Coll and a team of science experts come to the rescue with more than 40 teacher friendly ready to use analogies for biology earth and space studies chemistry and physics The authors show teachers how and when to select analogies for instruction why certain analogies work or break down how to gauge their effectiveness and how to improve them Designed to enhance teachers presentation and interpretation of analogies through focus action and reflection FAR this guidebook includes Key science concepts explained through effective models and analogies Research findings on the use of analogies and their motivational impact Guidelines that allow teachers and students to develop their own analogies Numerous visual aids science vignettes and anecdotes to support the use of analogies Linked to NSTA standards *Using Analogies in Middle Secondary Science Classrooms* will become a much used text by teachers who want to enrich inquiry based science instruction

2018 *Stoichiometry Unit Project* Luann Marie Decker,1998 **Introductory College Chemistry Students'**

Understanding of Stoichiometry Adam J. Wolfer,2000 Previous research has shown a gap between chemistry students conceptual and computational understandings of chemistry topics such as gas laws equilibrium and reactions This qualitative study examined the conceptual and computational understandings of stoichiometry of college students enrolled in a large lecture Introductory Chemistry course Factors that might influence students understandings were examined to determine their influence Possible influential factors examined included students prior coursework and their current chemistry instruction Instruction on stoichiometry was examined through classroom observations an instructor interview and review of the course resources Course exams and out of class assignments were also examined for their influence on students Student volunteers n 6 were interviewed to gauge their understanding of stoichiometry Students understanding was assessed through tasks that included a card sort solving conceptual and computational problems drawing representations of reactions and answering questions concerning their philosophy of learning chemistry Results indicated that students had an acceptable understanding of the particulate nature of matter but did not apply this knowledge to problem solving The students were most comfortable solving computational problems where they could apply algorithms learned from their instructor The students also applied algorithms in answering conceptual problems There appeared to be a connection between the students conceptual structures of stoichiometry and their ability to solve computational problems The lack of conceptual questions in assessment appeared to be a major contributing factor in the students lack of conceptual understanding because the students discounted the importance of learning aspects of stoichiometry that were not included on exams Other contributing factors included the computational focus of instruction on limiting reactant problems textbook presentation and student exercises
