Investigation of manual transmission purpose is to train mal year student for hands on and automotive investigation experience In this investigation of manual transmission two analyses have done First analysis is about how gear ratio influence vehicle performance curve Vehicle performances are determined not only by engine performance but also by transmission gear ratios differential gear reduction ratio and tires Second analysis is about size gear shaft design of gear shaft is influence by size of vehicle For example truck and small car have different of size gear shaft The second analysis prove why design of gear shaft influence by size of vehicle Cosmoswork are using in second analysis for test Stress deformation strain displacement in gear shaft at different size Investigation of manual transmission need to documentation because it will be best reference for student who s involved in fabrication of manual transmission This report have explain how to using Cosmoswork and calculation for produce vehicle performance curve from gear ratio Author Nissan Navara and Pathfinder Automotive Repair Manual Jeff Killingsworth,John Harold Haynes,2006-01-01 Navara D21 Pathfinder with 2 0L 2 4L 3 0L petrol engines 2WD 4WD Does not include diesel engine information *Torque-conversion Range and Gear Ratios in Automotive Transmissions* H. J. F?orster,1965 *Passenger Car and Light Truck Automatic Transmission and Automatic Transaxle Test Code* Automatic Transmission and Transaxle Committee,2015 The extent of test conditions on the dynamometer must be sufficient to determine the efficiency characteristics corresponding to the following range of vehicle operations in all gear ratios with locked torque converters open converter can also be done where appropriate and noted
aEfficiency versus output speed versus input torque bTorque ratio versus output speed cInput speed versus output speed dOutput torque versus output speed eParasitic loss versus input speed spin losses fCooler flow gOutput torque bias front wheel drive transaxles This Recommended Practice had defined a test procedure and process which gave a reasonably complete description of the efficiency and performance of a 20th century automatic transmission With the introduction of electronic controls the number of parameters which control the transmission s operation have expanded extensively and these need to be defined for each test The interaction between the transmission the environment the engine the cooling and other systems have also made test definition very difficult and complex Finally the diversity the rapid changes and the component complexity introduced by electric and hybrid drive system combine with the above difficulties to make it impractical to define a Recommended Practice which could provide a meaningful description of performance and efficiency of 21st century automotive transmissions The existing Recommended Practice J651 is being stabilized to preserve the test procedures for future reference
