

An interval history (including an update of complaints, reason for visit, review of systems and past family and/or social history) should be done. **Usually family health histories are completed across three generations looking specifically for patterns in genetic issues that negatively impact quality of life.**

The health history gives picture of the patient's current health and behavior risk status. Additional information than what is on a form may be required depending on the specialized service(s) to be provided or if the person presents with special needs or conditions. So a health history maybe may be problem focused, expanded problem focused, detailed, or comprehensive. **Regardless, documentation must be completed for each visit and/or assessment.**

Mental status evaluation may be done while doing health history (see neuro review).

\*\*\*\*\*

### **Physical Examination**

A comprehensive physical examination should be performed according to age specific preventive health guidelines. American Medical Association clinical practice guidelines recognize the following body areas and organ systems for purpose of the examination:

- **Body Areas:** Head (including the face); Neck; Chest (including breasts and axillae); Abdomen; genitalia, groin, buttocks; Back (including spine); and each extremity.
- **Organ Systems:** Constitutional (vital signs, general appearance); Eyes, Ear, Nose, Throat; Cardiovascular; Gastrointestinal; Genitourinary; Musculoskeletal; Dermatological; Neurological; Psychiatric; Hematologic/lymphatic/immunological
- **Integumentary:** Both overall body and organ systems should have skin assessments integrated into them. Integument includes skin, hair and nails.

Normal and abnormal findings should be recorded on a health history and physical examination form.

\*\*\*\*\*

### **Measurements**

Body measurements include length or height, weight, and head circumference for children from birth to 36 months of age. Thereafter, body measurements include height and weight. The assessment of hearing, speech and vision are also measurements of an individual's function in these areas. The Denver Development Screening Test measures an infant's and young child's gross motor, language, fine motor-adaptive and personal-social development milestones. If developmental delay is suspected based on an assessment of a parent's development/behavior concern or if delays are suspected after a screening of development benchmarks, a written referral to a physician or pediatric nurse practitioner is imperative.

A patient's measurements can be compared with a standard, expected, or predictable measurement for age and gender. Deviation from standards helps identify significant conditions requiring close monitoring or referral to a physician or pediatric nurse practitioner.

The significance of measurements and actions to take when they deviate from normal expectations are age-specific.

## **Nln Health Physical Assessment Study Guide:**

*Manual of Simulation in Healthcare* Richard H. Riley, 2008 Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide Simulation and skills centres have become established to integrate simulation into mainstream education in all medical nursing and paramedical fields Borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation Simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion Section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre The features strengths and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements There is a guide to producing scenarios and medical props that can enhance the training experience The third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education Teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education The manual concludes with guides for the major specialties that use simulation including military paediatrics CPR and medical response teams obstetrics and anaesthesia

**Pathophysiology, Physical Assessment, and Pharmacology** Janie T. Best, Grace Buttriss, Annette Hines, 2021-11-04 Integrate the 3Ps for a real world holistic approach to nursing care This first of its kind text integrates the 3 Ps pathophysiology pharmacology and physical assessment into an integrative whole that reflects the real world of how students learn and nurses practice This groundbreaking approach promotes a deeper understanding of these three essential and often challenging content areas paralleling the importance of integration in the planning delivery and evaluation of nursing care Its lifespan approach features six major population based sections cover the key conditions and disorders that nurses are likely to encounter in practice reviewing the important pathophysiology pharmacology and physical exam and assessment information relative to each disorder Each section concludes with a case study that presents a new disorder relative to the population in that section reinforcing the authors application focused approach and developing must have critical thinking skills
